

Fitting and Plotting of Binomial distribution & Poisson distribution

1. If you want to pick five numbers at random from the set 1:50, then you can

```
> sample(1:40,5)
[1] 15 36 10 40 24
```

```
> sample(1:40.5)
[1] 3 27 5 8 38
```

```
> sample(1:40.5)
[1] 19 17 37 20 6
```

2. Sampling with replacement is suitable for modelling coin tosses or throws of a die.

```
## Roll a die(it gives different results)
```

```
> sample(1:6,10,replace=TRUE)
[1] 4 4 4 1 4 6 3 5 4 2
```

```
> sample(1:6,10,replace=TRUE)
```

[1] 3 3 4 3 2 1 4 2 6 3

3. `## roll 2 die. Even fancier` `# replace when rolling dice`

```
> dice = as.vector(outer(1:6,1:6,paste))
> sample(dice,5,replace=TRUE)
[1] "1 2" "5 2" "4 4" "6 2" "6 4"
```

```
> sample(dice,5,replace=TRUE)
[1] "4 3" "3 6" "1 6" "4 2" "4 6"
```

4. #Toss a coin

```
> sample(c("H","T"),10,replace=TRUE)
```

```
> sample(c("H","T"),10,replace=TRUE)
```

```
[1] "H" "H" "H" "H" "T" "T" "T" "H" "H" "H"
```

[1] "T" "T" "H" "H" "T" "H" "H" "H" "T" "T"

- ## 5. # Combination

$$\begin{pmatrix} 10 \\ 3 \end{pmatrix} \text{ OR } 10c_3$$

> choose(10,3)

[1] 120

```

      (20)
      6
> choose(20,6)
[1] 38760

```

```

      (30)
      5
> choose(30,5)
[1] 142506

```

```

Binomial Distribution

The **binomial distribution** is a discrete probability distribution. It describes the outcome of n independent trials in an experiment. Each trial is assumed to have only two outcomes, either success or failure. If the probability of a successful trial is p , then the probability of having x successful outcomes in an experiment of n independent trials is as follows.

$$P[X = x] = \binom{n}{x} p^x q^{n-x}, x = 0, 1, \dots, n$$

Mean $\mu_1 = np$

Variance: $\mu_2 = npq$

Syntax:-

For a binomial(n, p) random variable X , the R functions involve the abbreviation "binom":

`dbinom(k,n,p)` # binomial(n, p) density at k : $\Pr(X = k)$

`pbinom(k,n,p)` # binomial(n, p) CDF at k : $\Pr(X \leq k)$

`qbinom(P,n,p)` # binomial(n, p) P -th quantile

`rbinom(N,n,p)` # N binomial(n, p) random variables

`help(Binomial)` # documentation on the functions related
to the Binomial distribution

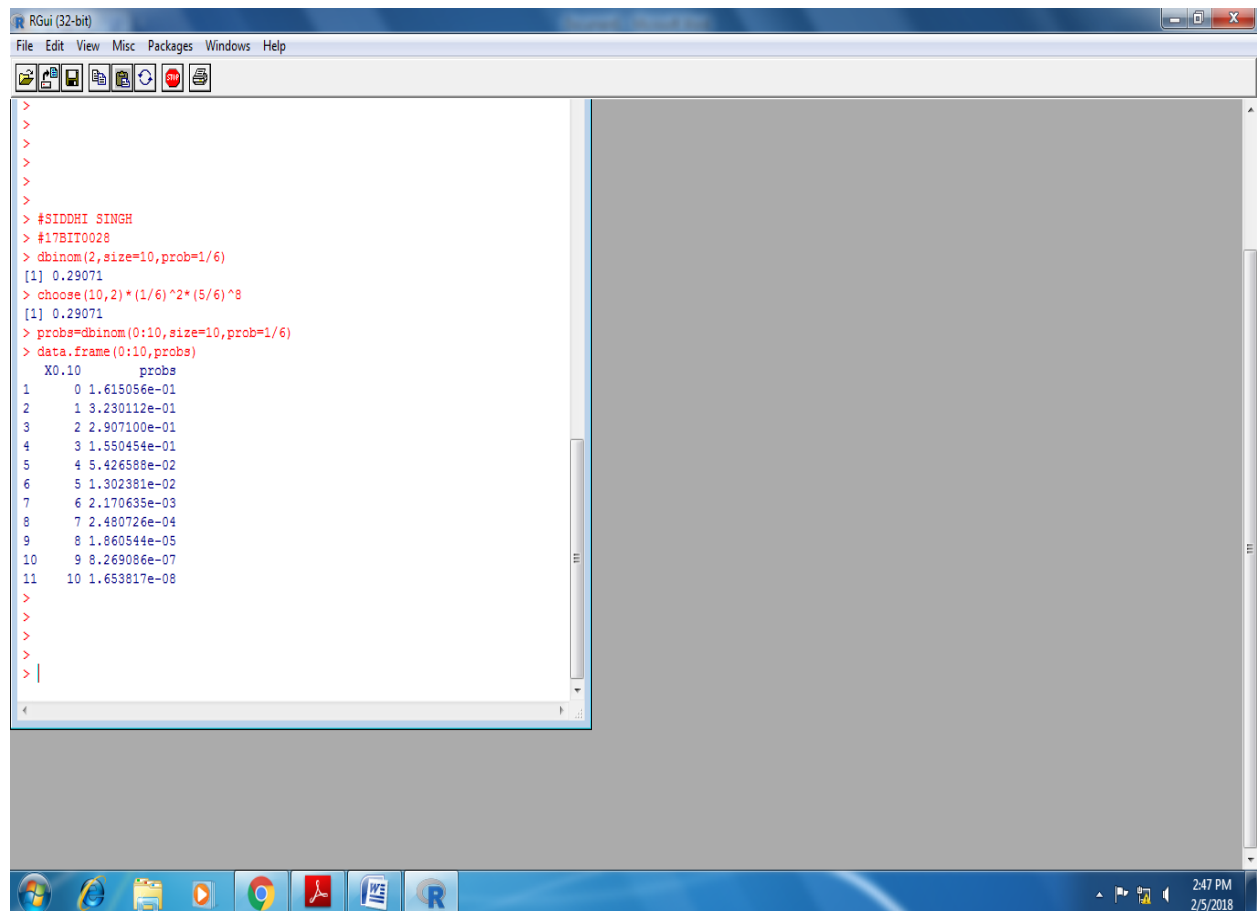

Problem1. Find the Probability of getting two '4' among ten dice

```
>dbinom(2,size=10,prob=1/6)
[1] 0.29071
```

Problem 2: Find the P(2) by using binomial probability formula

```
> choose(10,2)*(1/6)^2*(5/6)^8
[1] 0.29071
```

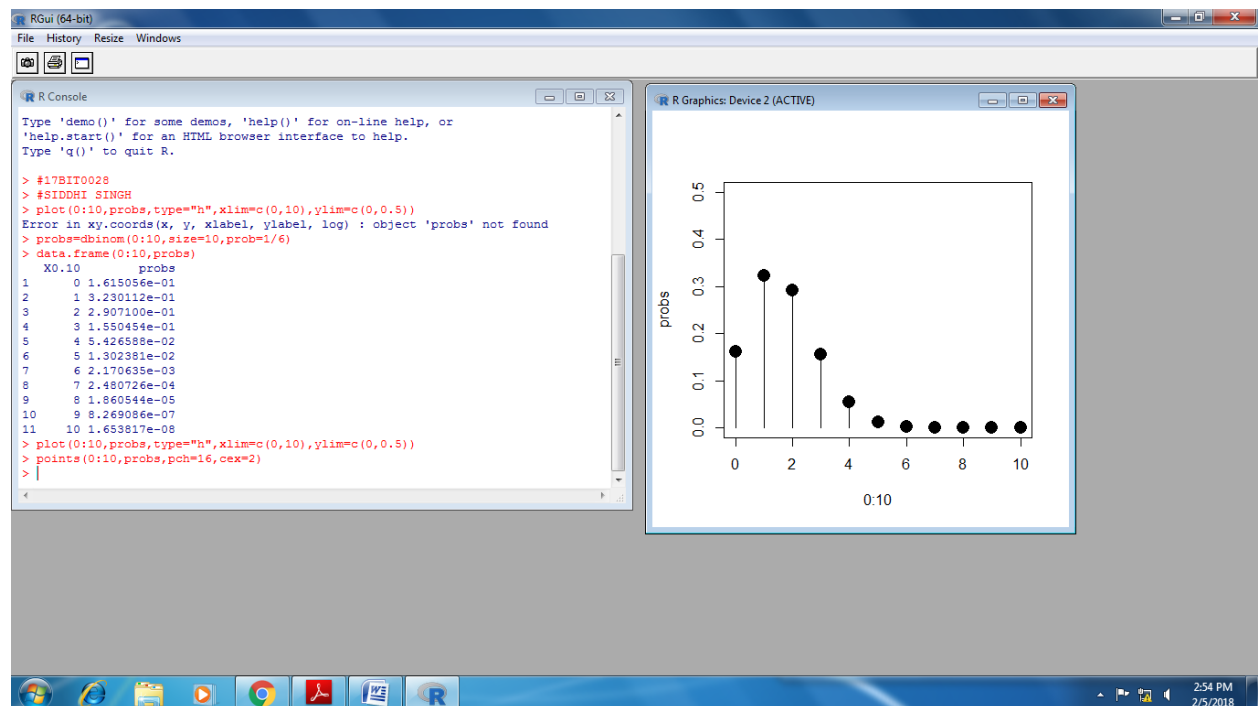

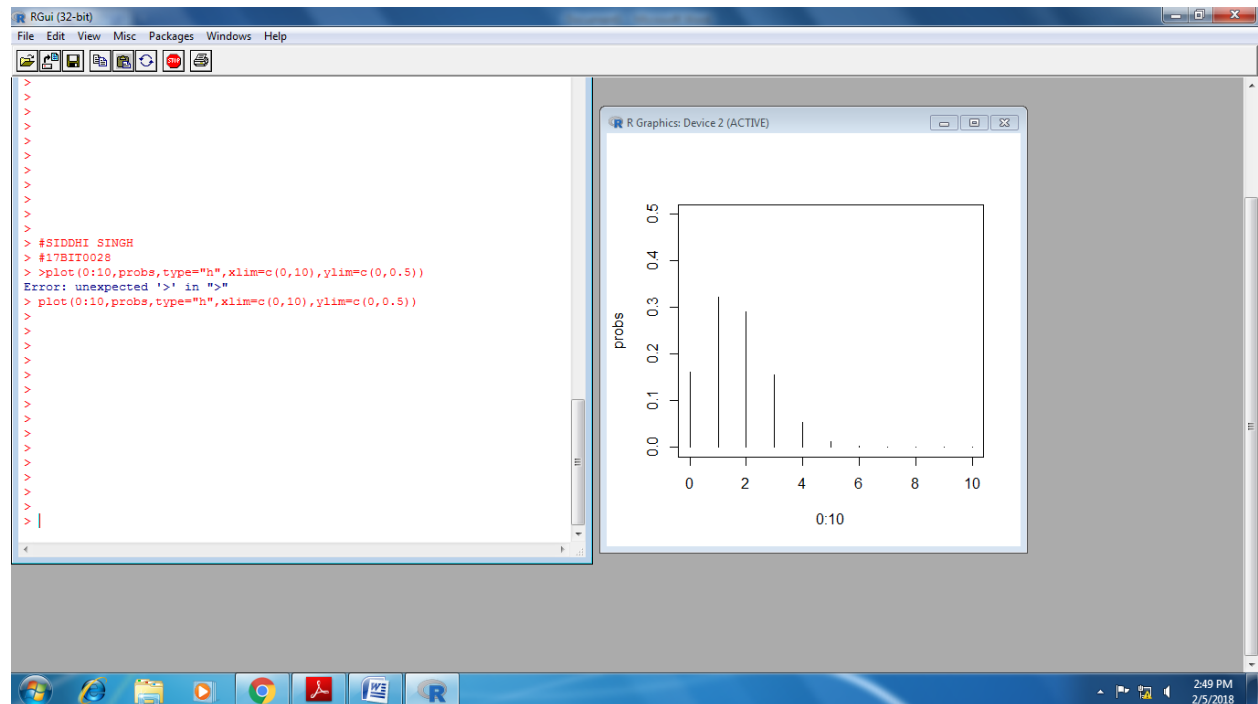

Problem 3: Find the table for BIN(n=10,P=1/6)

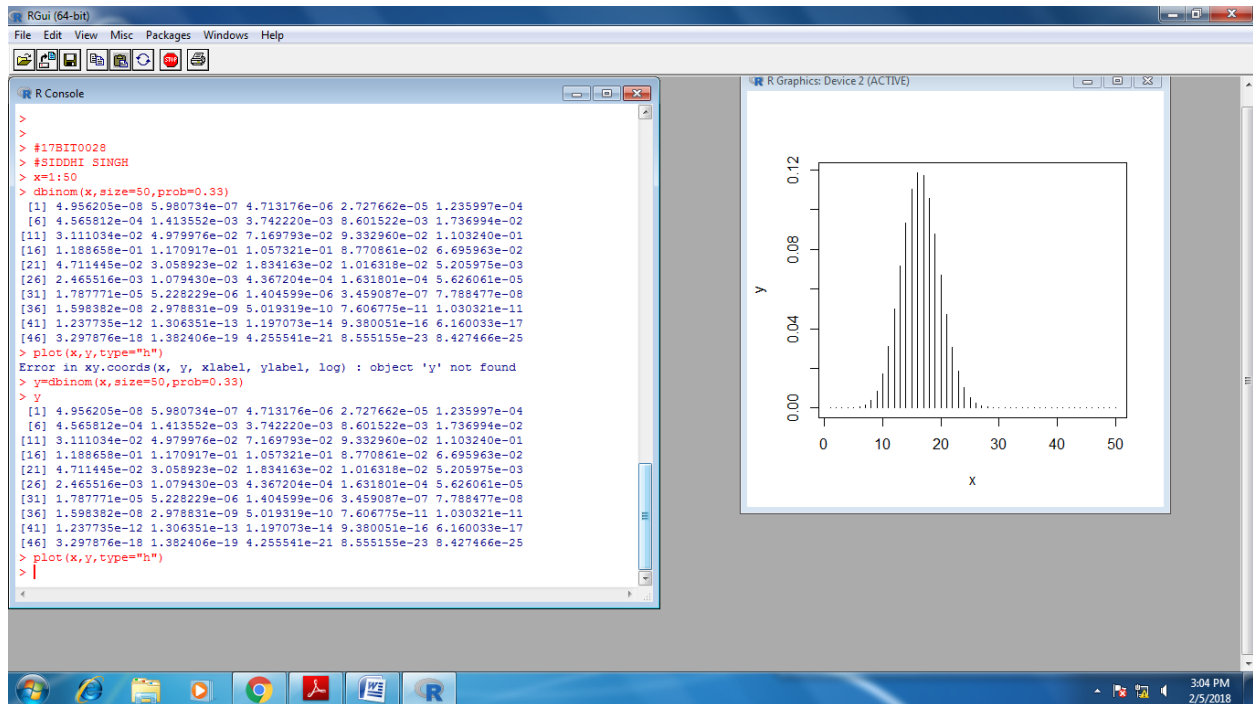

```

>
>
>

```

The window title is "RGui (64-bit)". The menu bar includes "File", "Edit", "View", "Misc", "Packages", "Windows", and "Help". The toolbar contains icons for opening, saving, printing, and other standard functions. The status bar at the bottom shows the system clock as "3:16 PM 2/5/2018".

**Problem 2 :** Check the relationship between mean and variance in Poisson distribution(4)  
with  $n=100$

The screenshot displays the RGui (64-bit) interface. The menu bar includes File, Edit, View, Misc, Packages, Windows, and Help. Below the menu bar is a toolbar with icons for file operations and running code. The main workspace contains a script with the following R code:

```
>
>
>
>
>
>
> #SIDDHI SINGH
> #17BIT0028
>
> X.val=0:100
> P.val=dpois(X.val,4)
> EX=sum(X.val*P.val)
> EX
[1] 4
> sum((X.val-EX)^2*P.val)
[1] 4
>
>
>
>
>
>
> |
```

The console at the bottom shows the results of the execution, which are identical to the last few lines of the script.

The taskbar at the bottom of the screen shows various application icons, including Chrome, Firefox, and the R logo, along with the system clock indicating 3:18 PM on 2/5/2018.

Problem 3 : Compute Probabilities and cumulative probabilities of the values between 0 and 10 for the parameter 2 in poisson distribution.

### Problem 3: Poisson distribution with parameter '2'

1. How to obtain a sequence from 0 to 10
2. Calculate  $P(0), P(1), \dots, P(10)$  when  $\lambda = 2$  and Make the output prettier
3. Find  $P(x \leq 6)$
4. Sum all probabilities
5. Find  $P(Y > 6)$
6. Make a table of the first 11 Poisson probs and cumulative probs when  $\mu = 2$  and make the output prettier
7. Plot the probabilities Put some labels on the axes and give the plot a title:

**AIM:** Computing/plotting and visualising the following probability distributions

**About Normal Distribution:-**

**THE NORMAL DISTRIBUTION :**

A random variable  $X$  is said to possess normal distribution with mean  $\mu$  and variance  $\sigma^2$ , if its probability density function can be expressed of the form,

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}, \quad -\infty < x < +\infty$$

The standard notation used to denote a random variable to follow normal distribution with appropriate mean and variance is,  $X \sim N(\mu, \sigma^2)$

**STANDARD NORMAL DISTRIBUTION :**

If a random variable  $X$  follows normal distribution with mean  $\mu$  and variance  $\sigma^2$ , its transformation  $Z = \frac{X-\mu}{\sigma}$  follows standard normal distribution (mean 0 and unit variance)

$$f(z) = \frac{1}{\sqrt{2\pi}} e^{-z^2/2}, \quad -\infty < z < +\infty$$

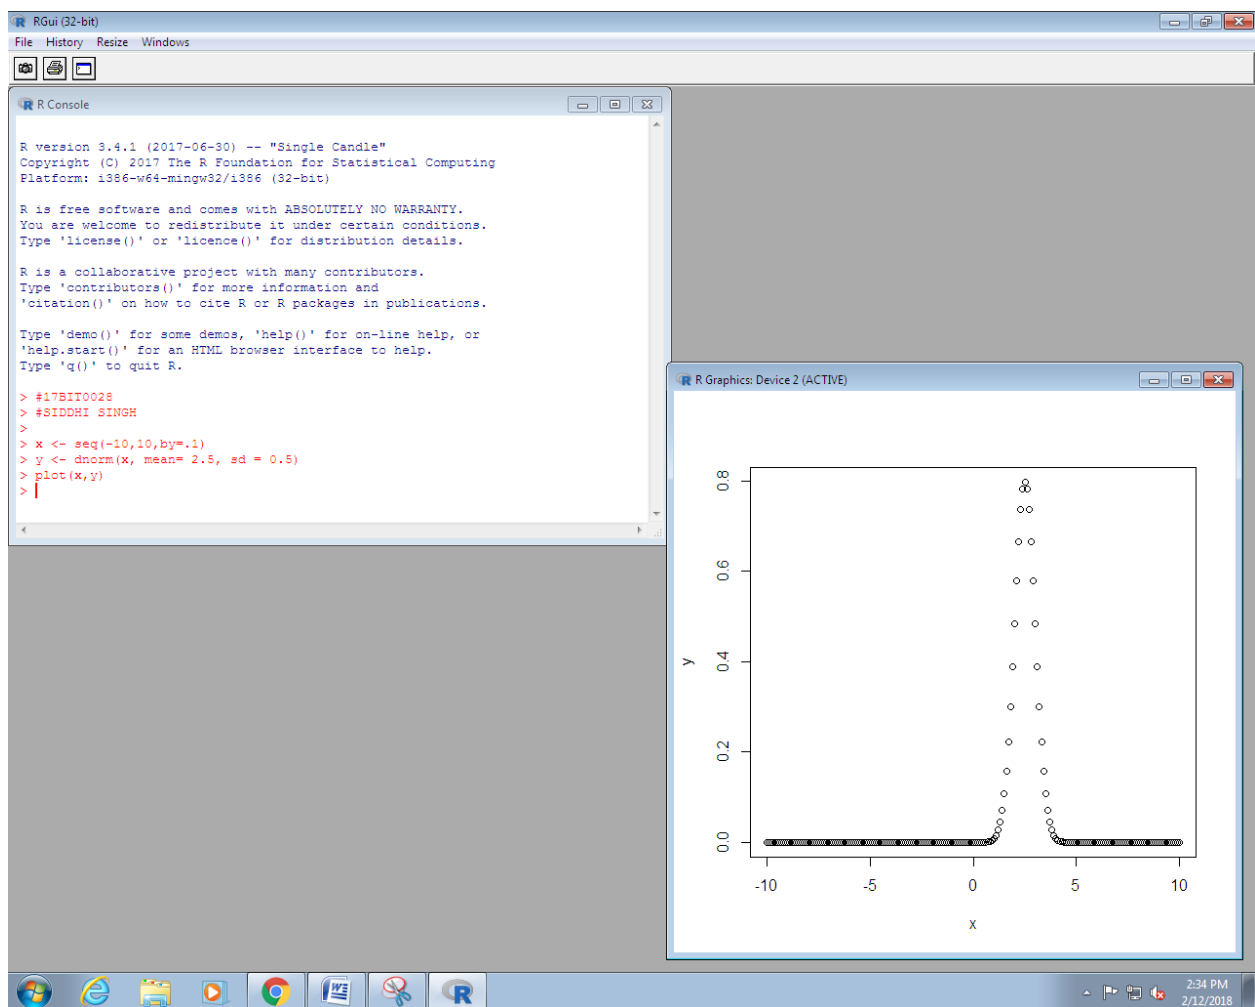

The distribution function of the standard normal distribution

$$F(z) = \int_{-\infty}^z \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}} dx$$

## *(I) Normal distribution computations and graphs*

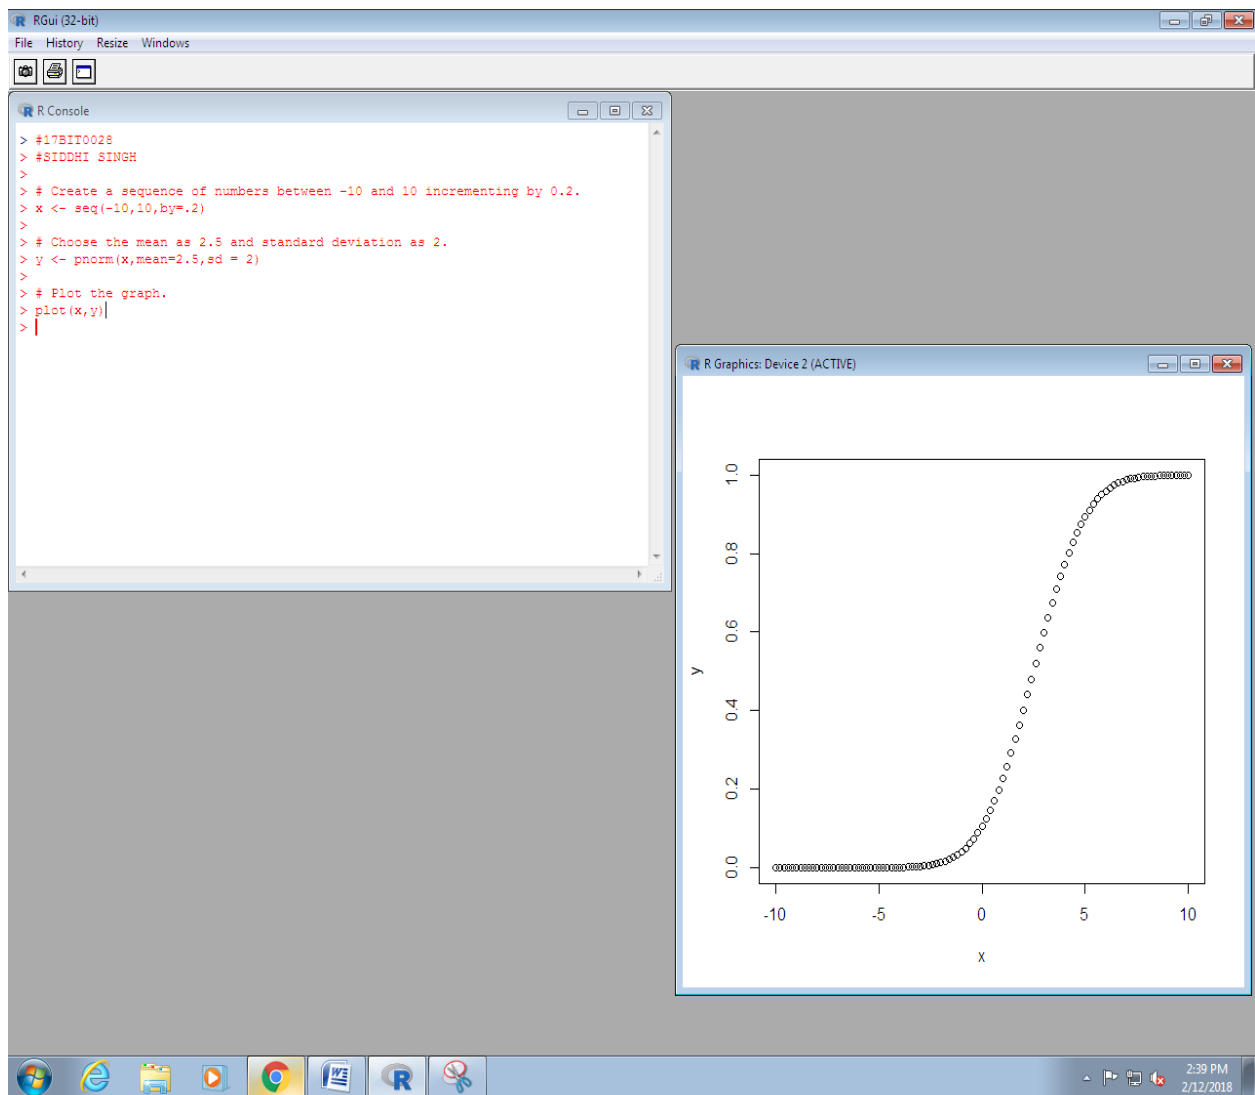

***dnorm() :***

*This function gives height of the probability distribution at each point for a given mean and standard deviation.*

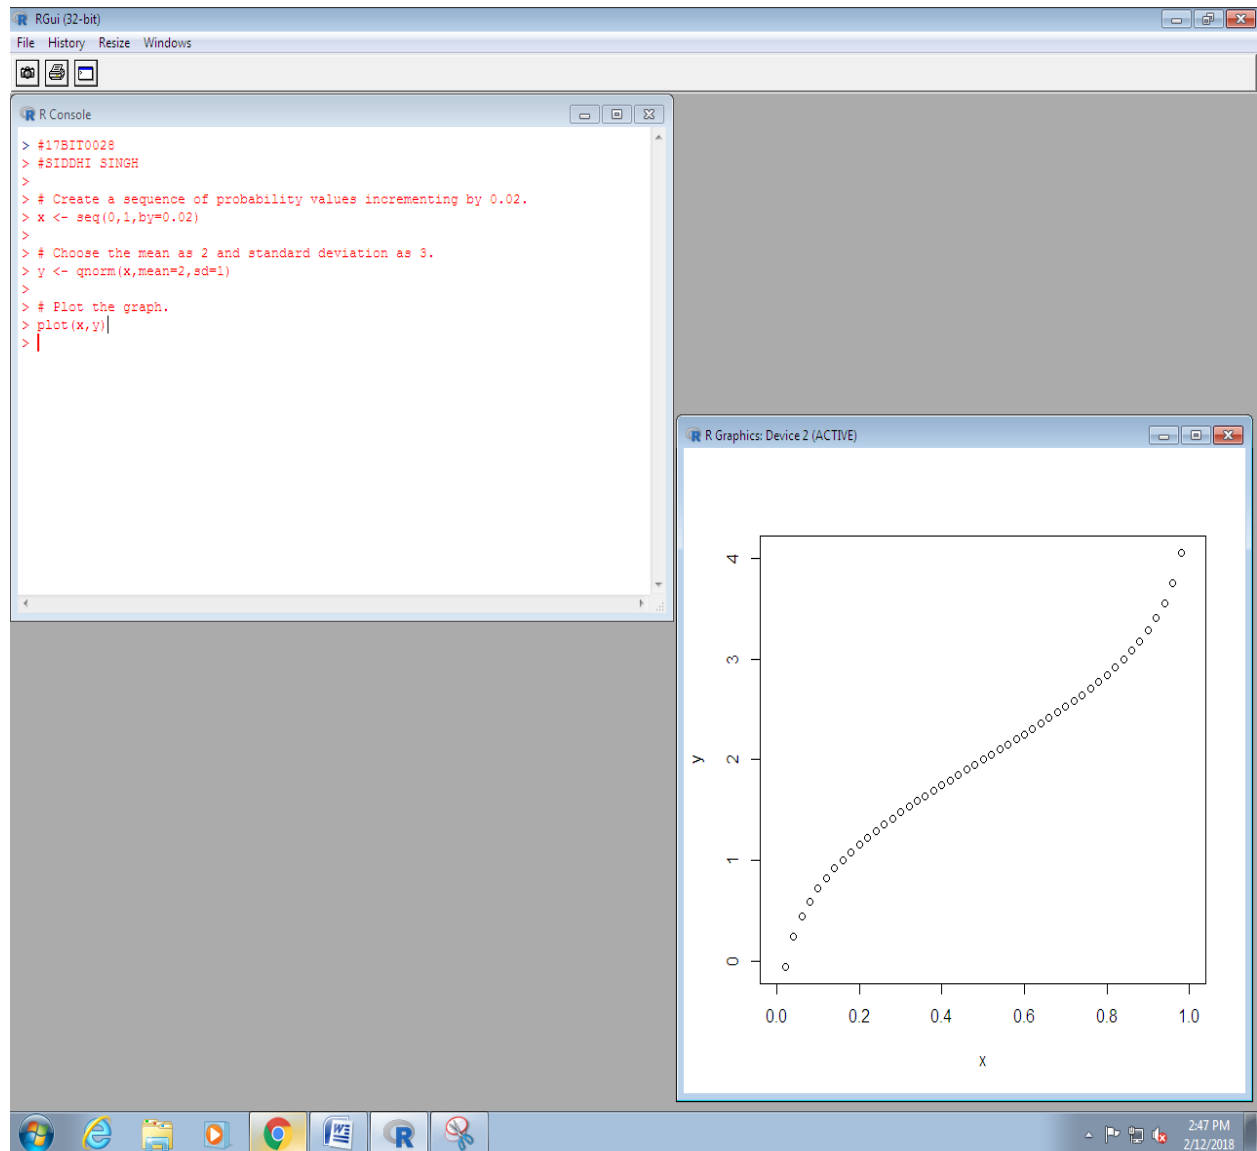

## ***pnorm():***

*This function gives the probability of a normally distributed random number to be less than the value of a given number. It is also called "Cumulative Distribution Function".*

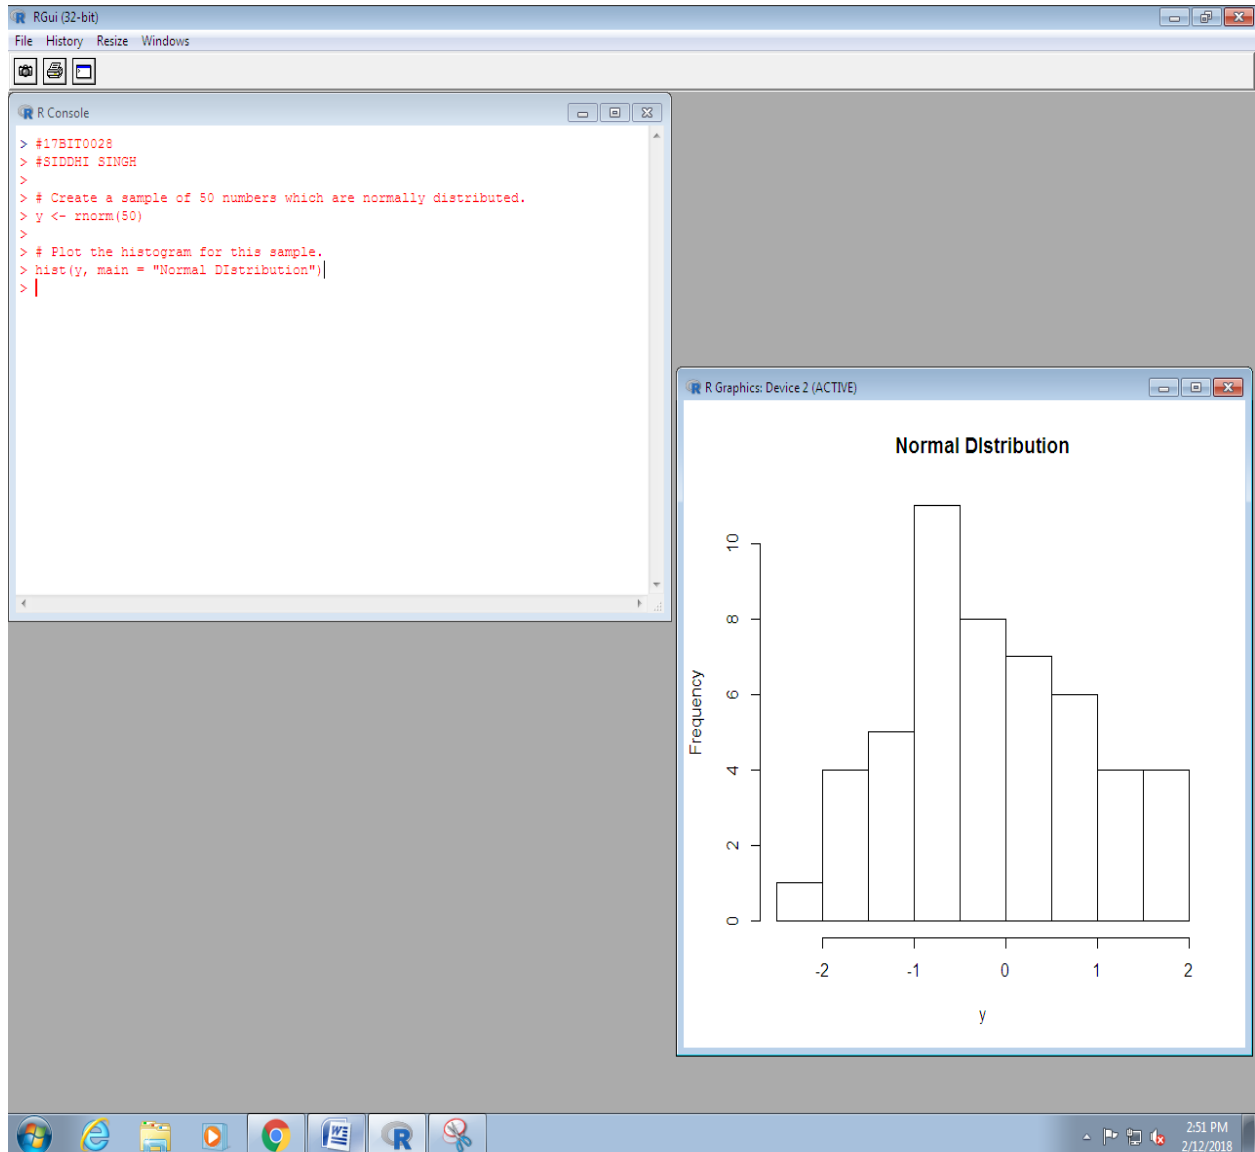

## qnorm()

*This function takes the probability value and gives a number whose cumulative value matches the probability value.*

## ***rnorm()***

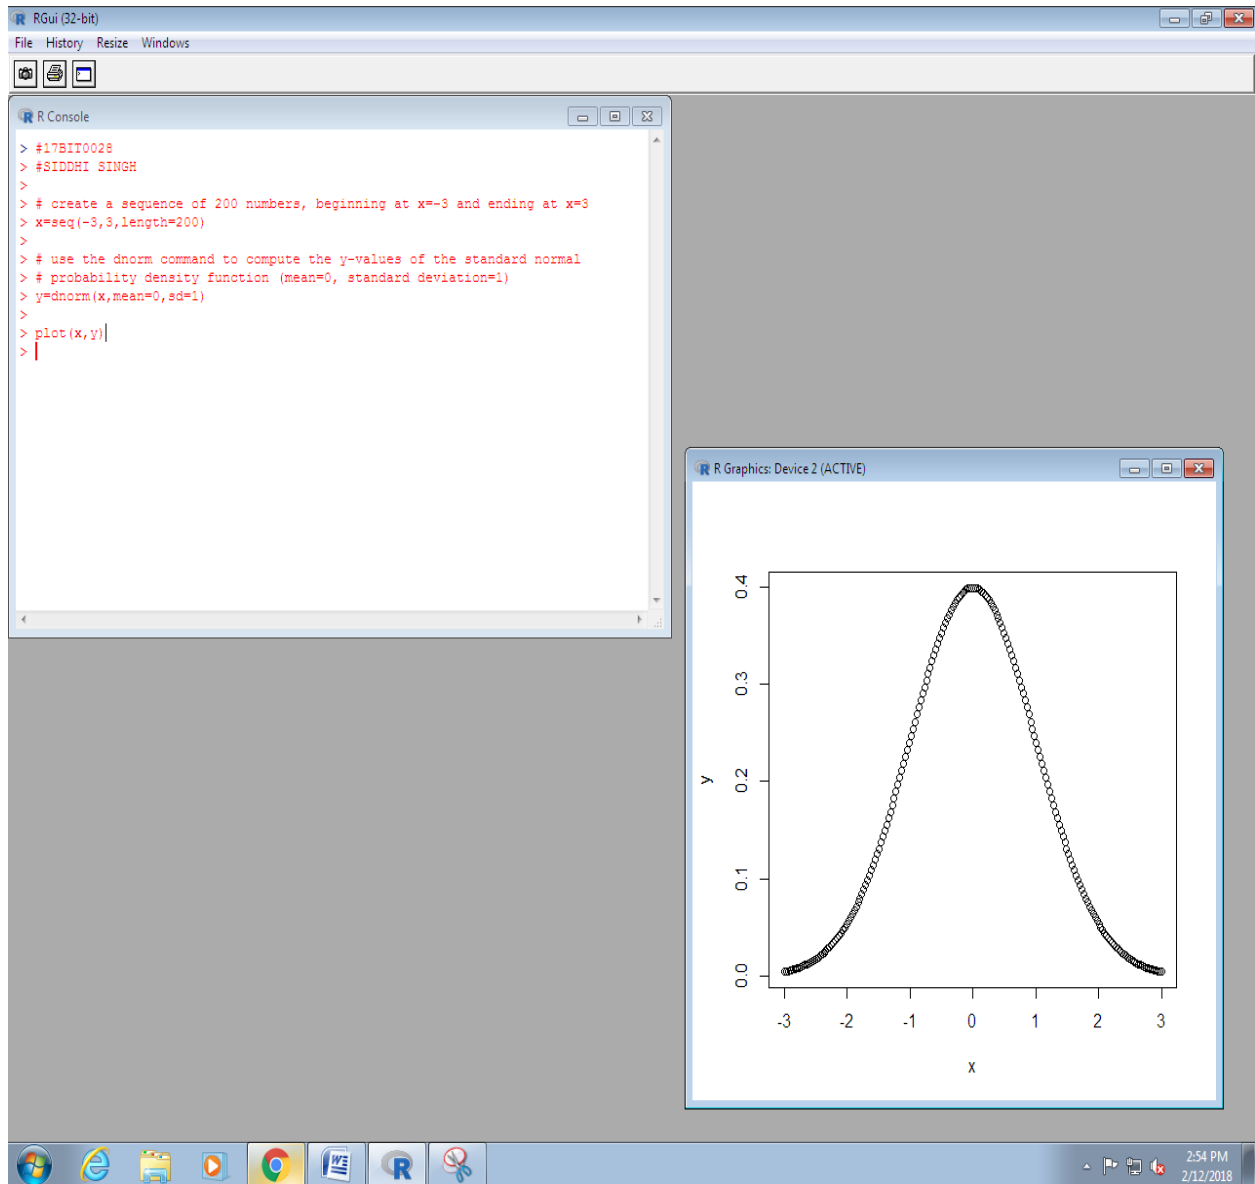

*This function is used to generate random numbers whose distribution is normal. It takes the sample size as input and generates that many random numbers. We draw a histogram to show the distribution of the generated numbers.*

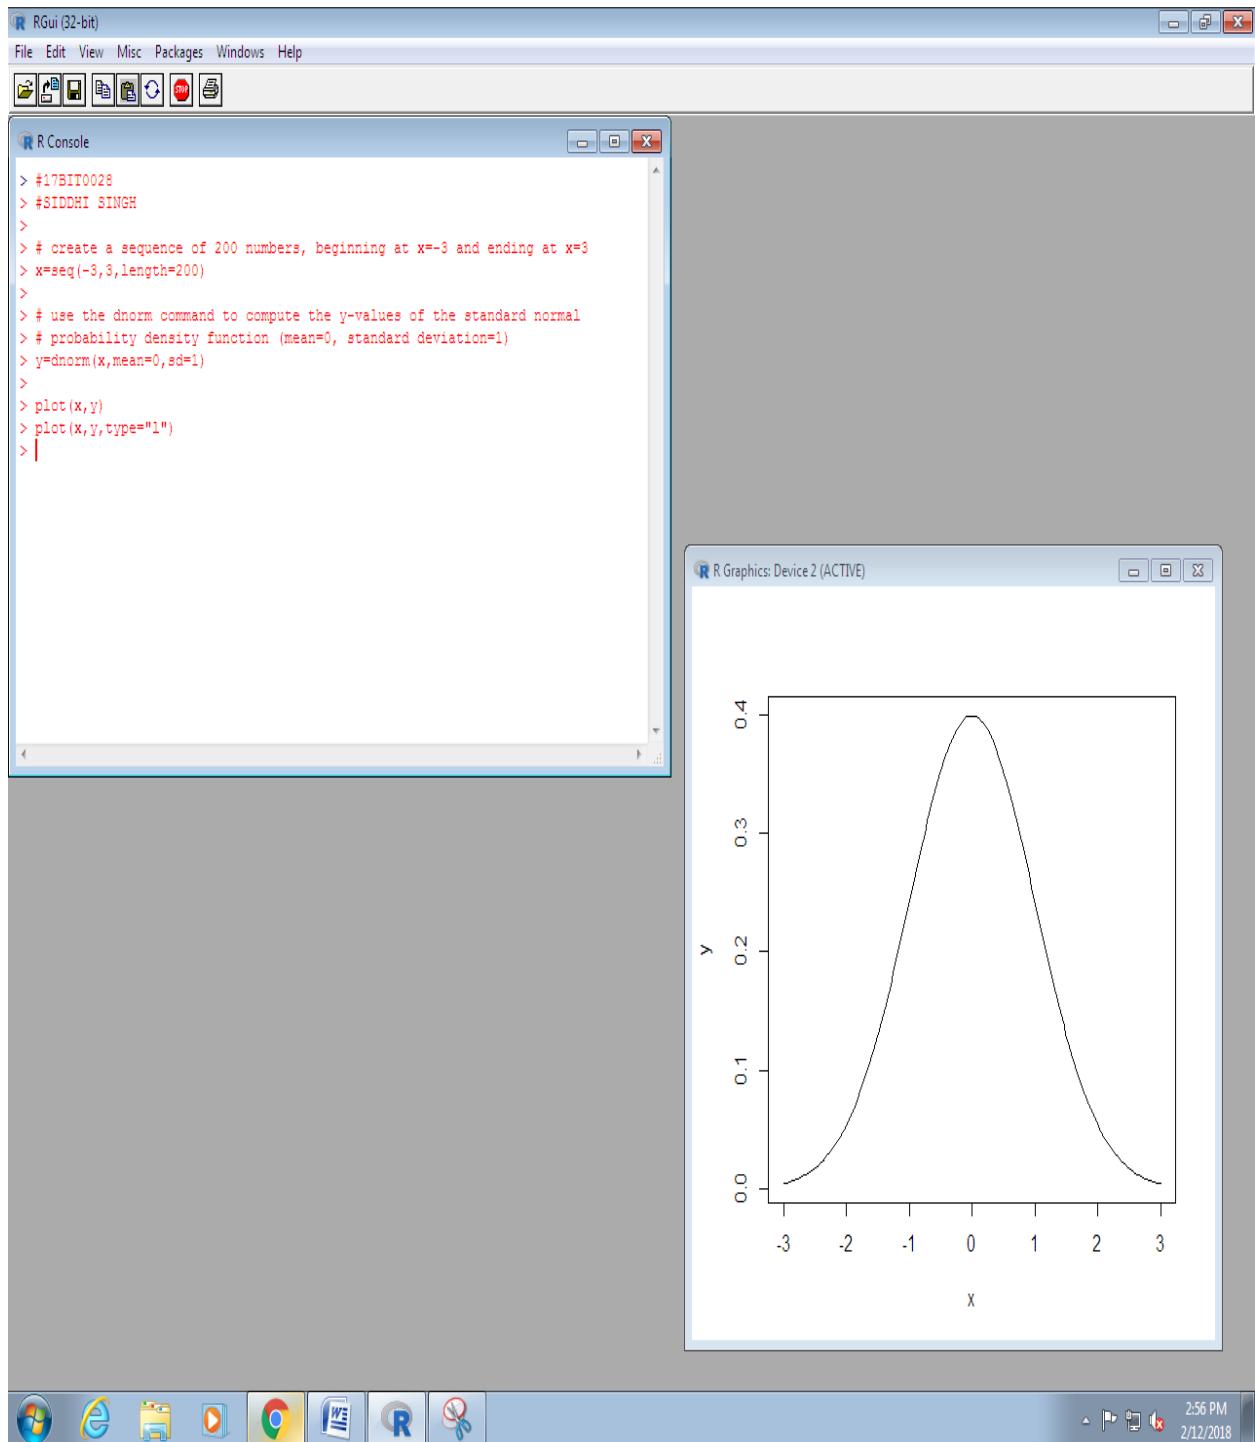

## CODE 1 :-

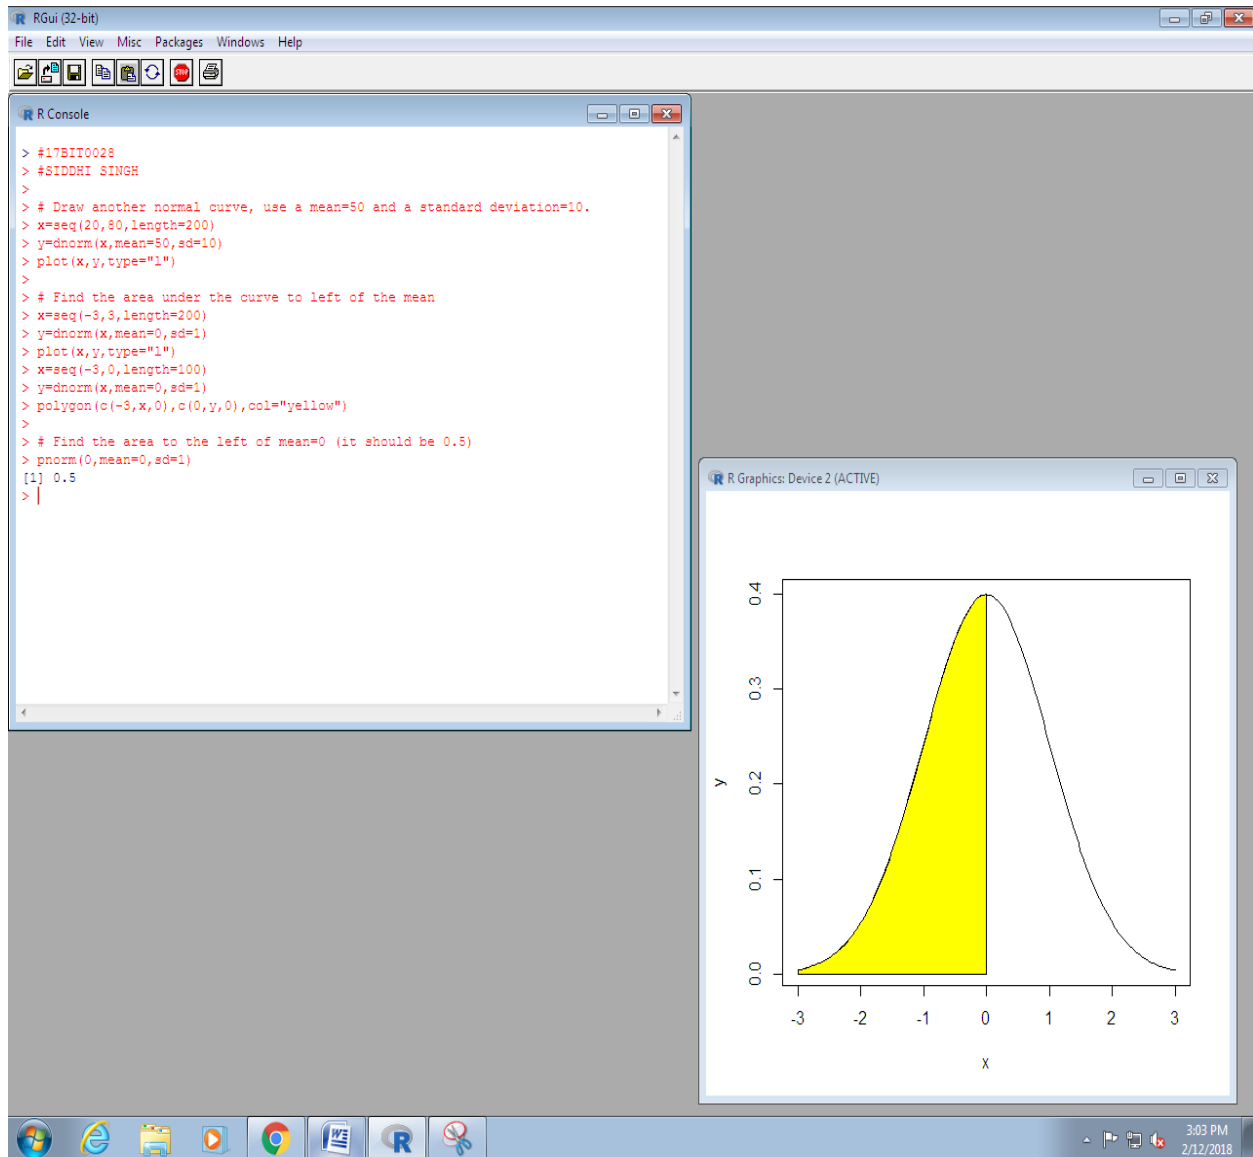

*# create a sequence of 200 numbers, beginning at x=-3 and ending at x=3*

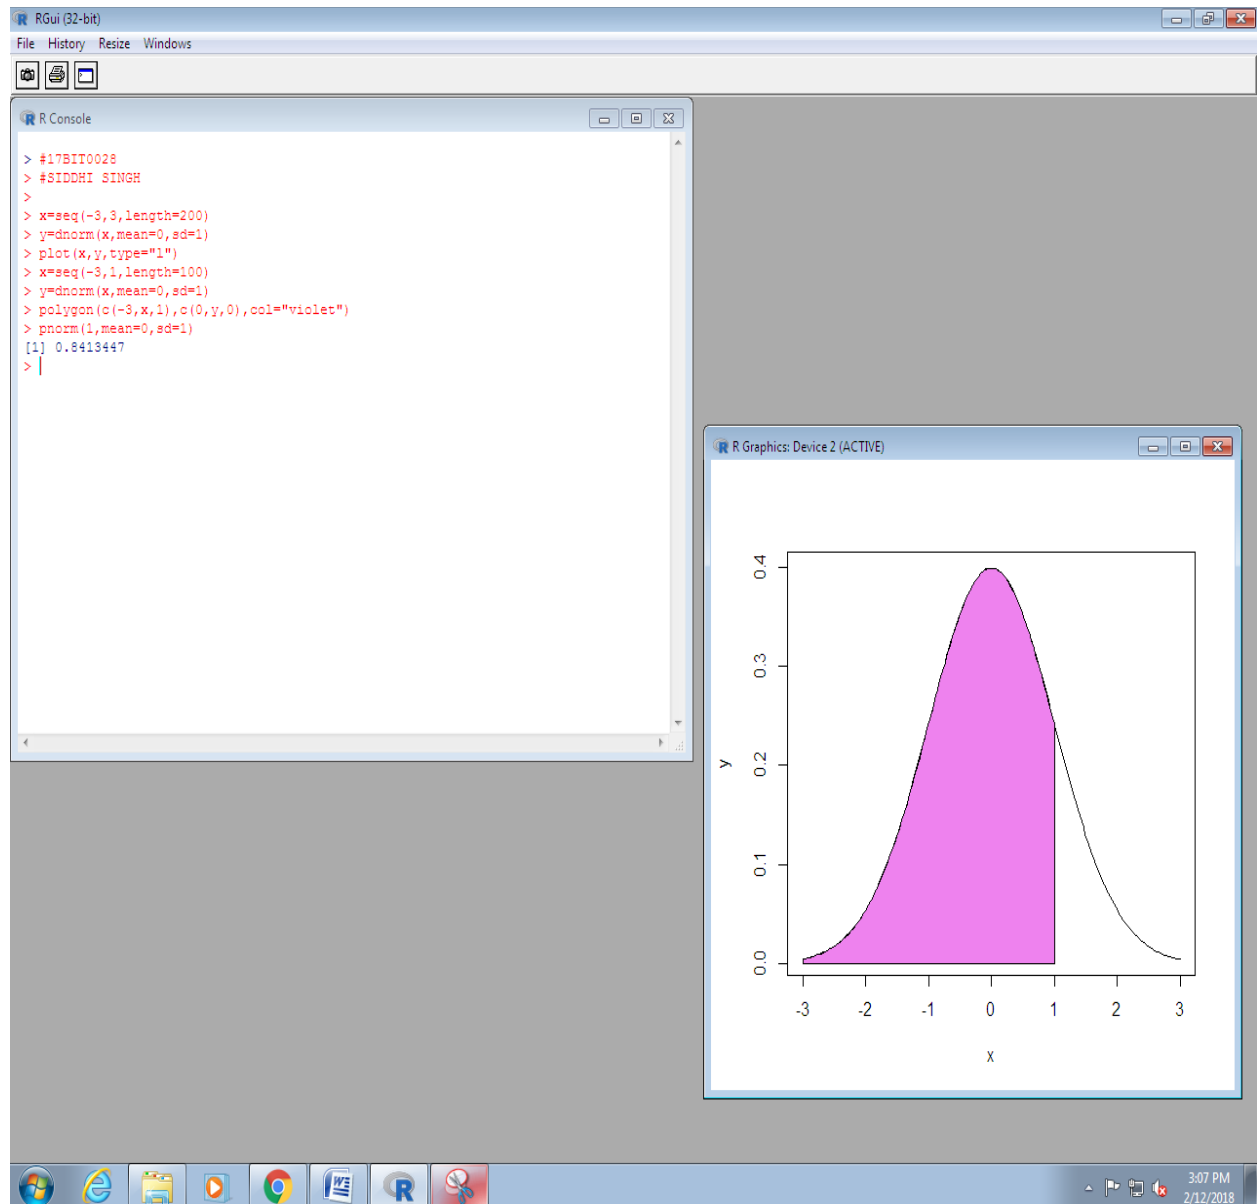

## CODE 2:

*# Draw another normal curve, use a mean=50 and a standard deviation=10.*

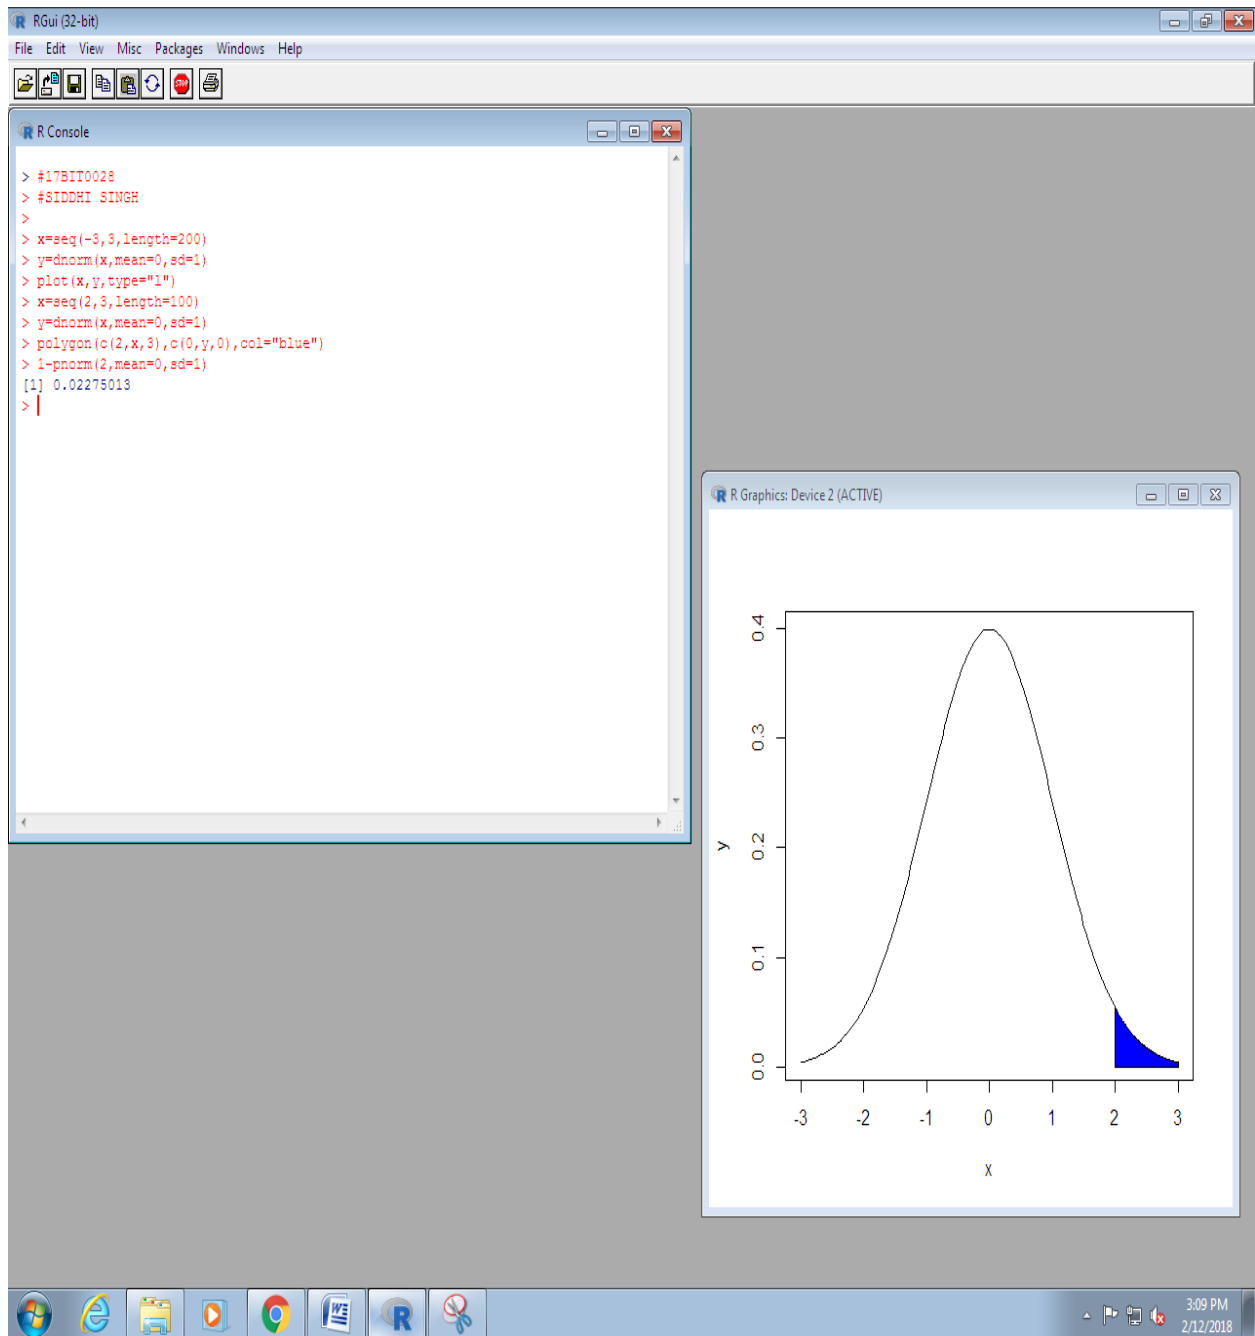

### CODE 3:

*# Find the area to the left of 1. First, draw an image, then compute*

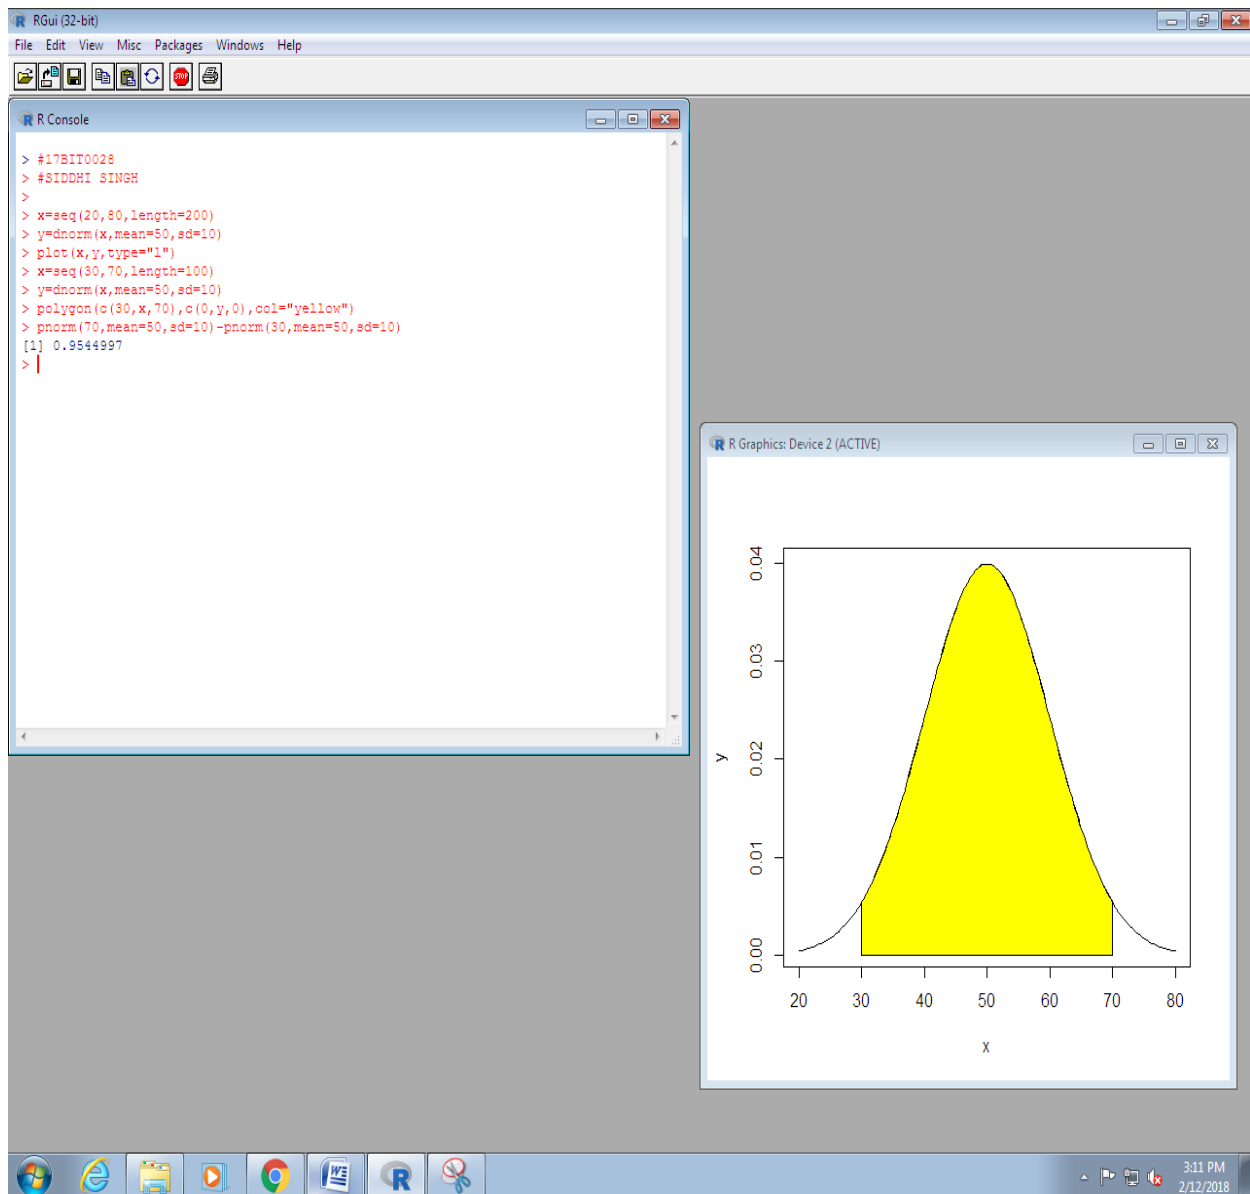

## CODE 4:-

# Get the area to the right of 2. First, draw an image, then compute

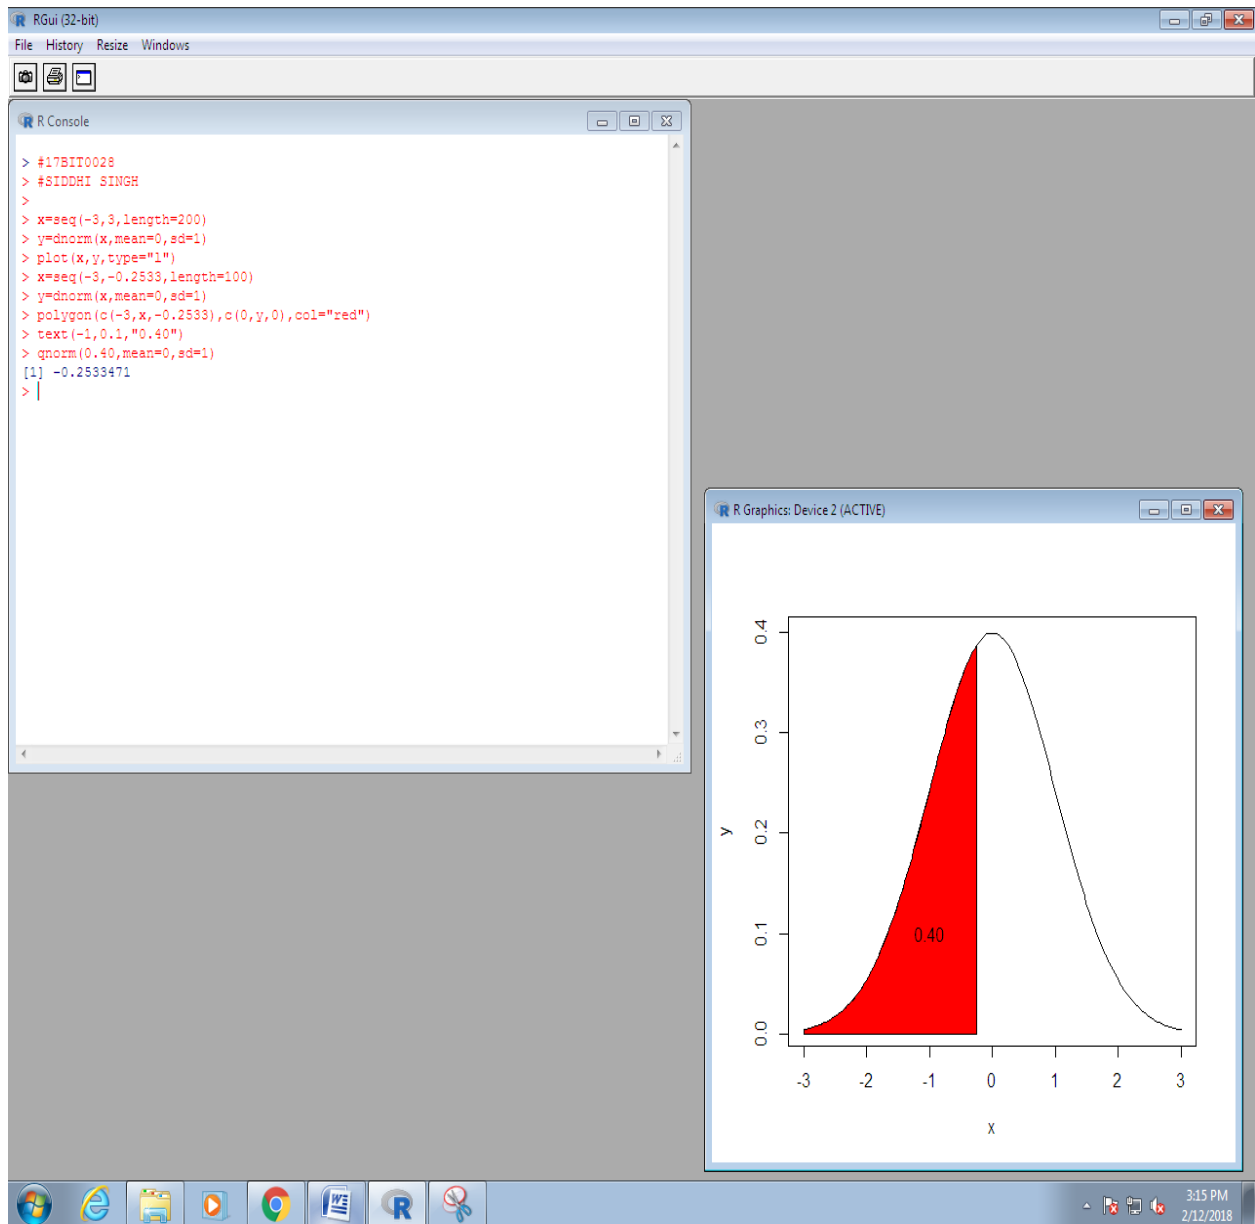

## CODE 5:

# Use the pnorm command to find areas under the normal density curve,  
# regardless of the mean and standard deviation values.  
# Example, mean=50 and standard deviation=10.

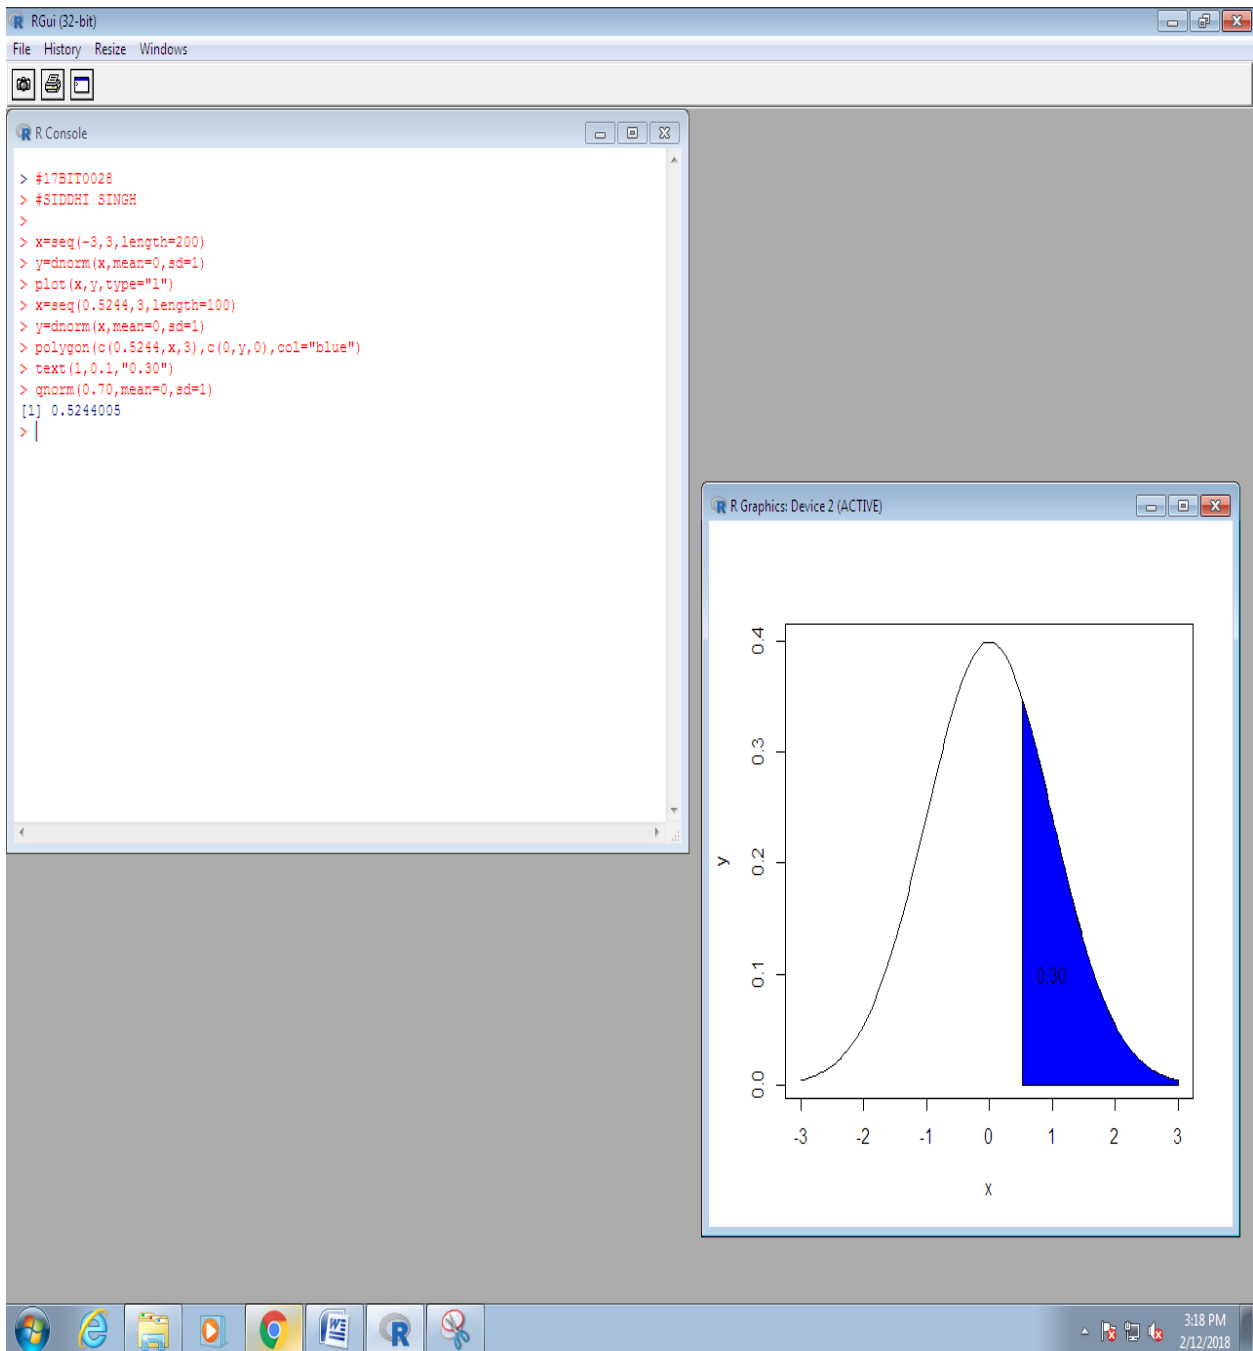

## CODE 5:

# Find the Quantile (Percentile) - i.e., reverse the process.  
# That is, given the area, find the value of x.

## CODE 6:

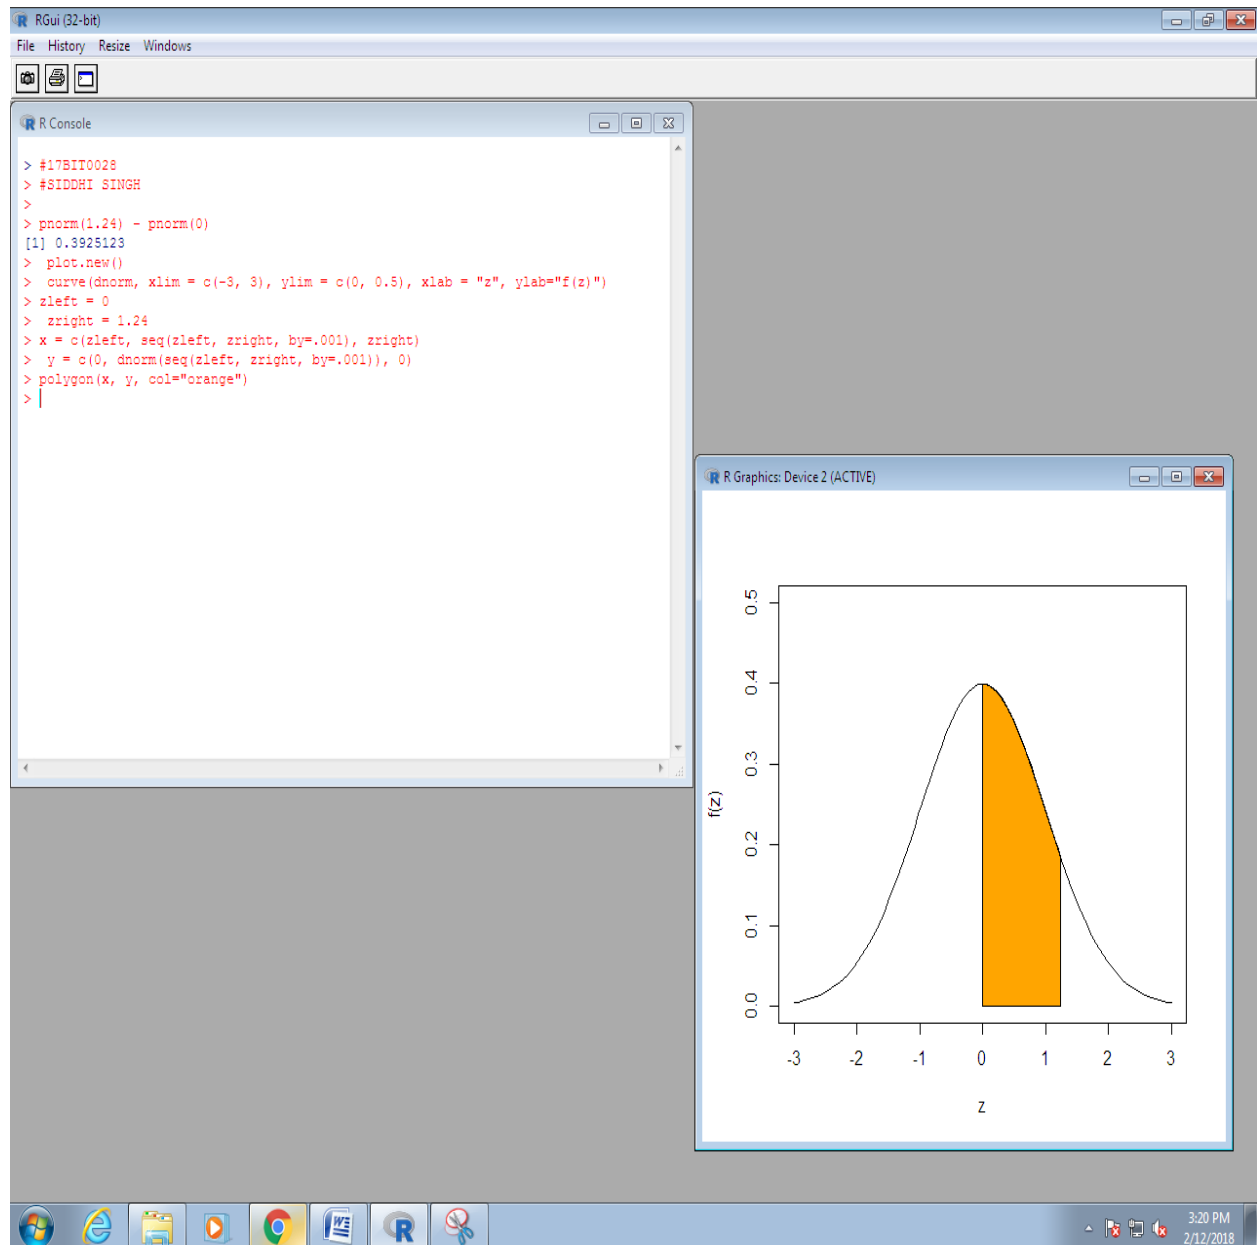

# density curve to the right of x is the given area.

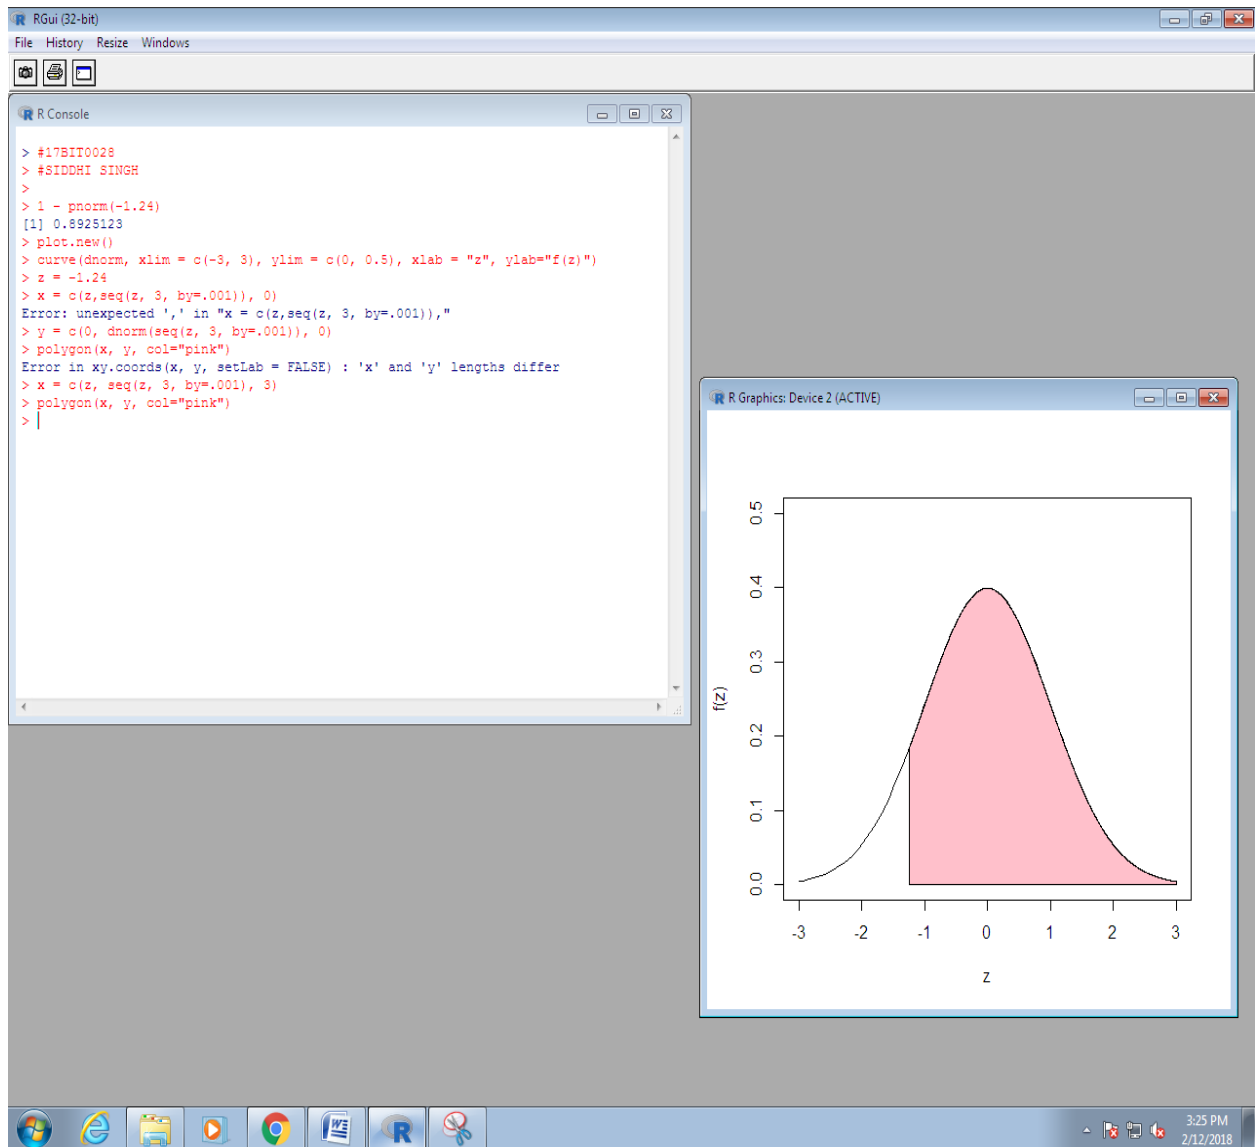

## CODE 7:

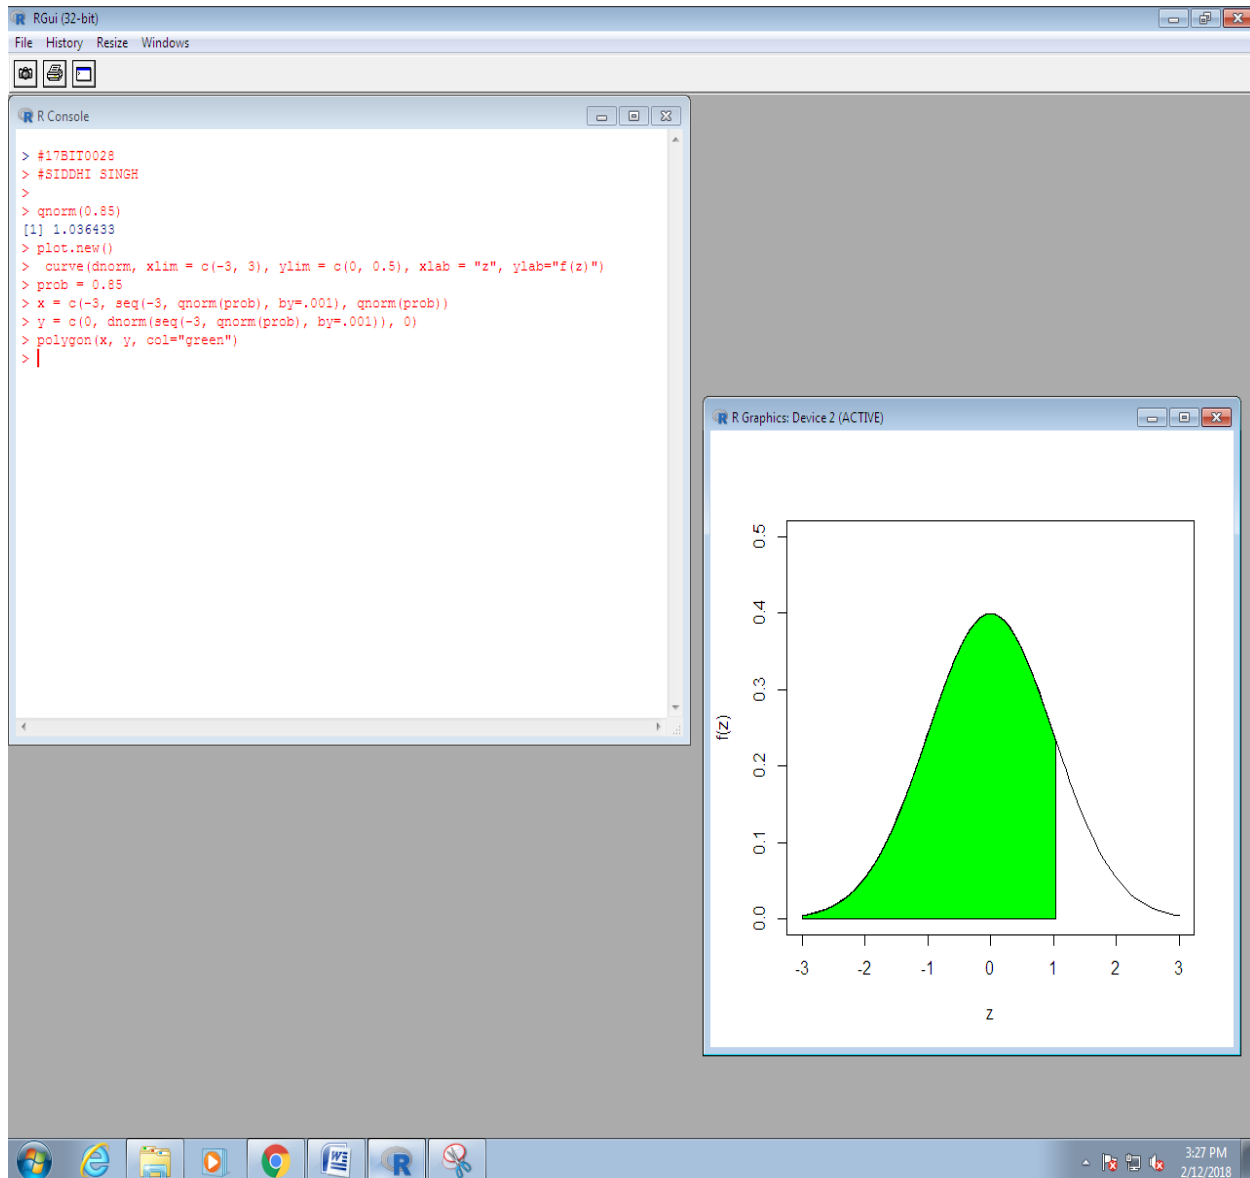

1. Find  $P(0 < Z < 1.24)$

2. Find  $P(Z > -1.24)$

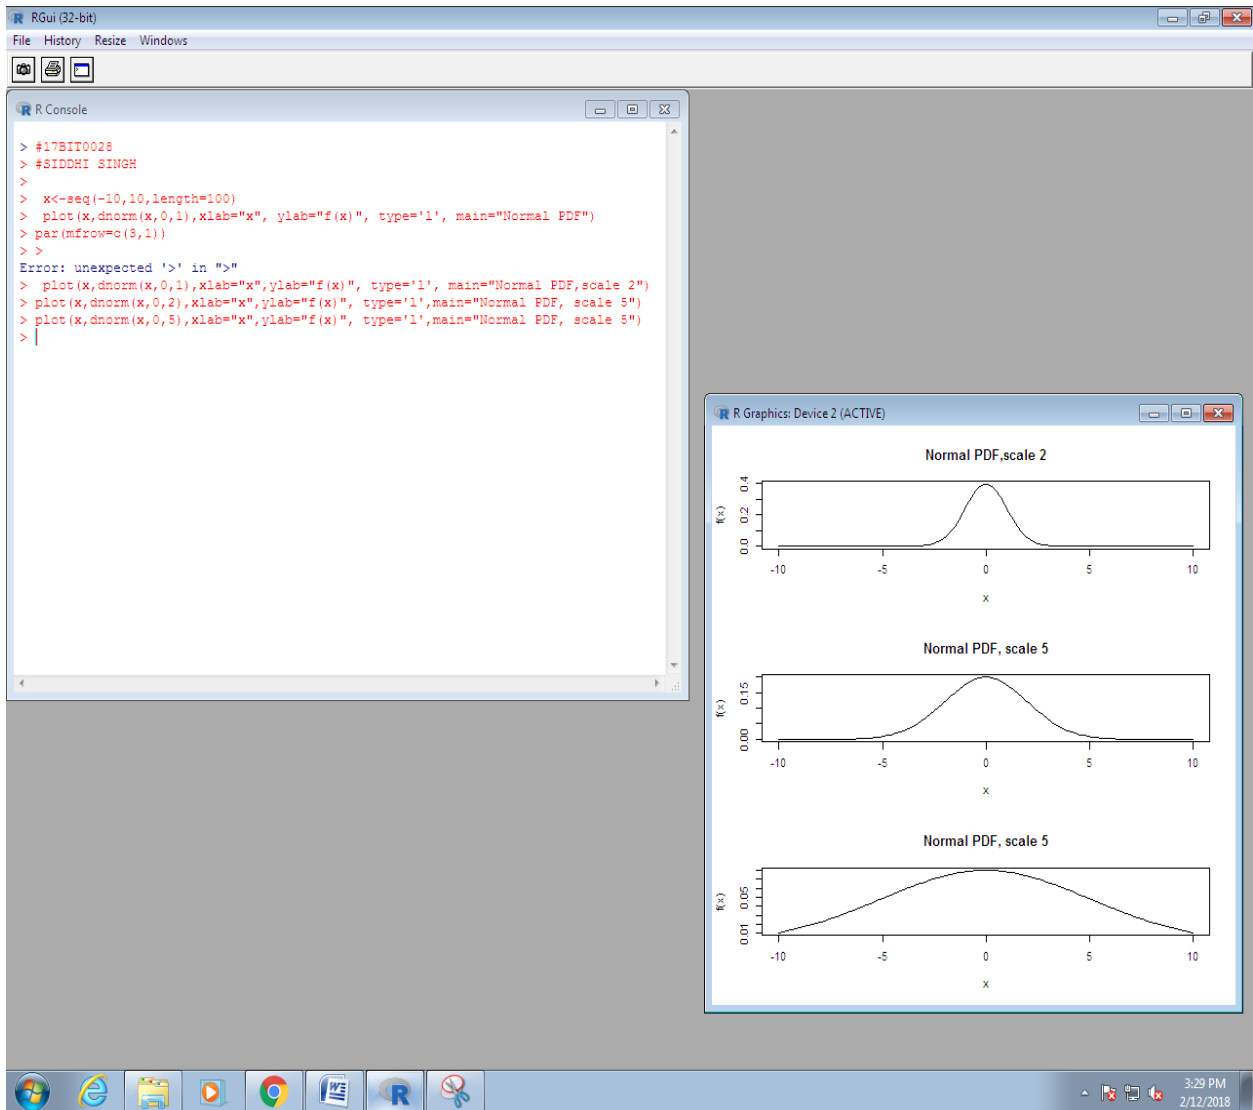

3. Find  $P_{85}$ , the 85<sup>th</sup> percentile of the standard normal “z” distribution.

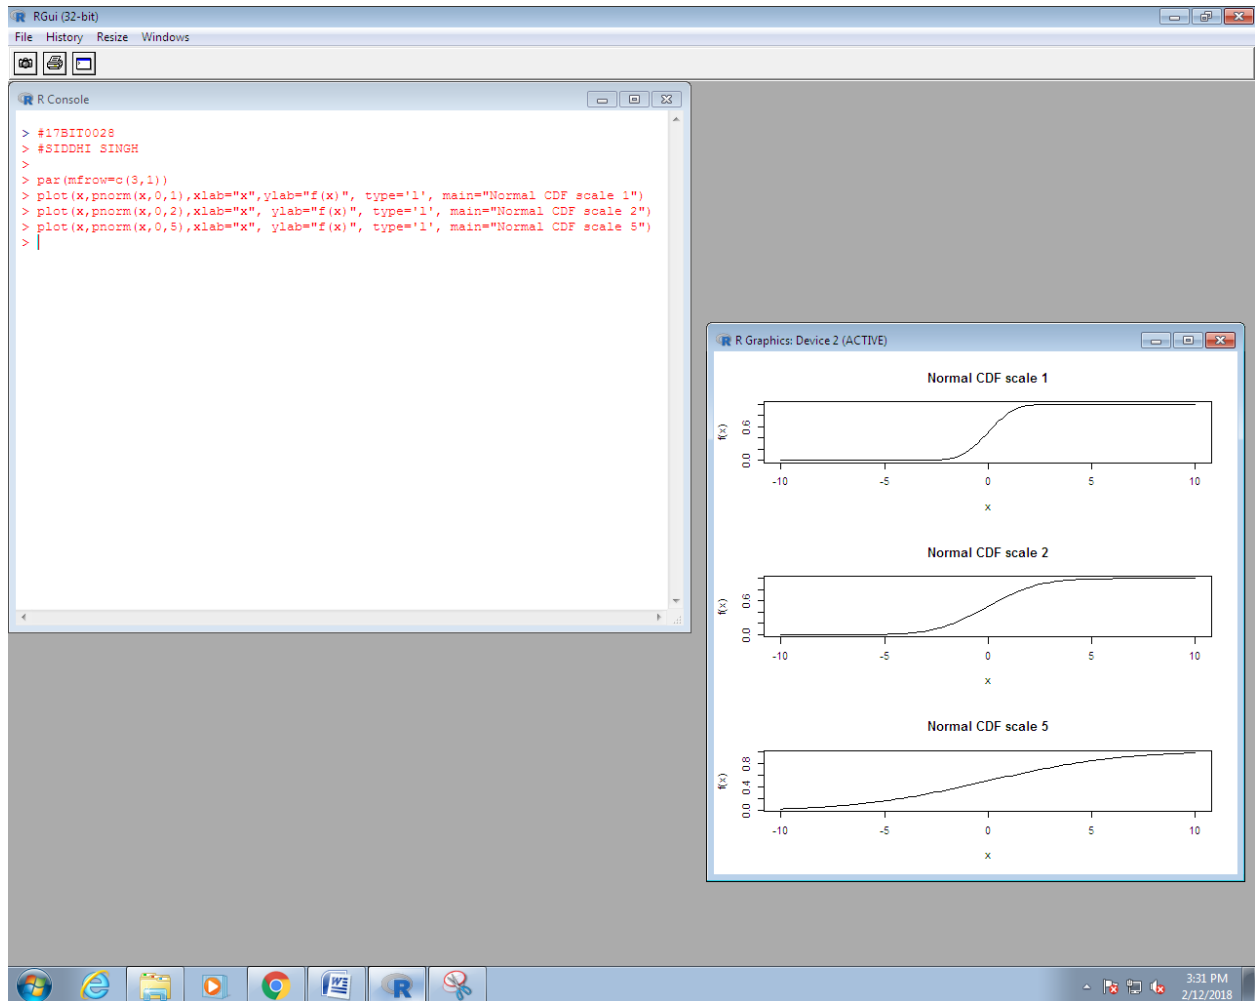

## CODE 8:

(a) Plot a normal density for a range of  $x$  from  $-10$  to  $10$  with mean  $0$  and standard deviation  $1$ : {This Problem Explains types of kurtosis by changing standard deviation}

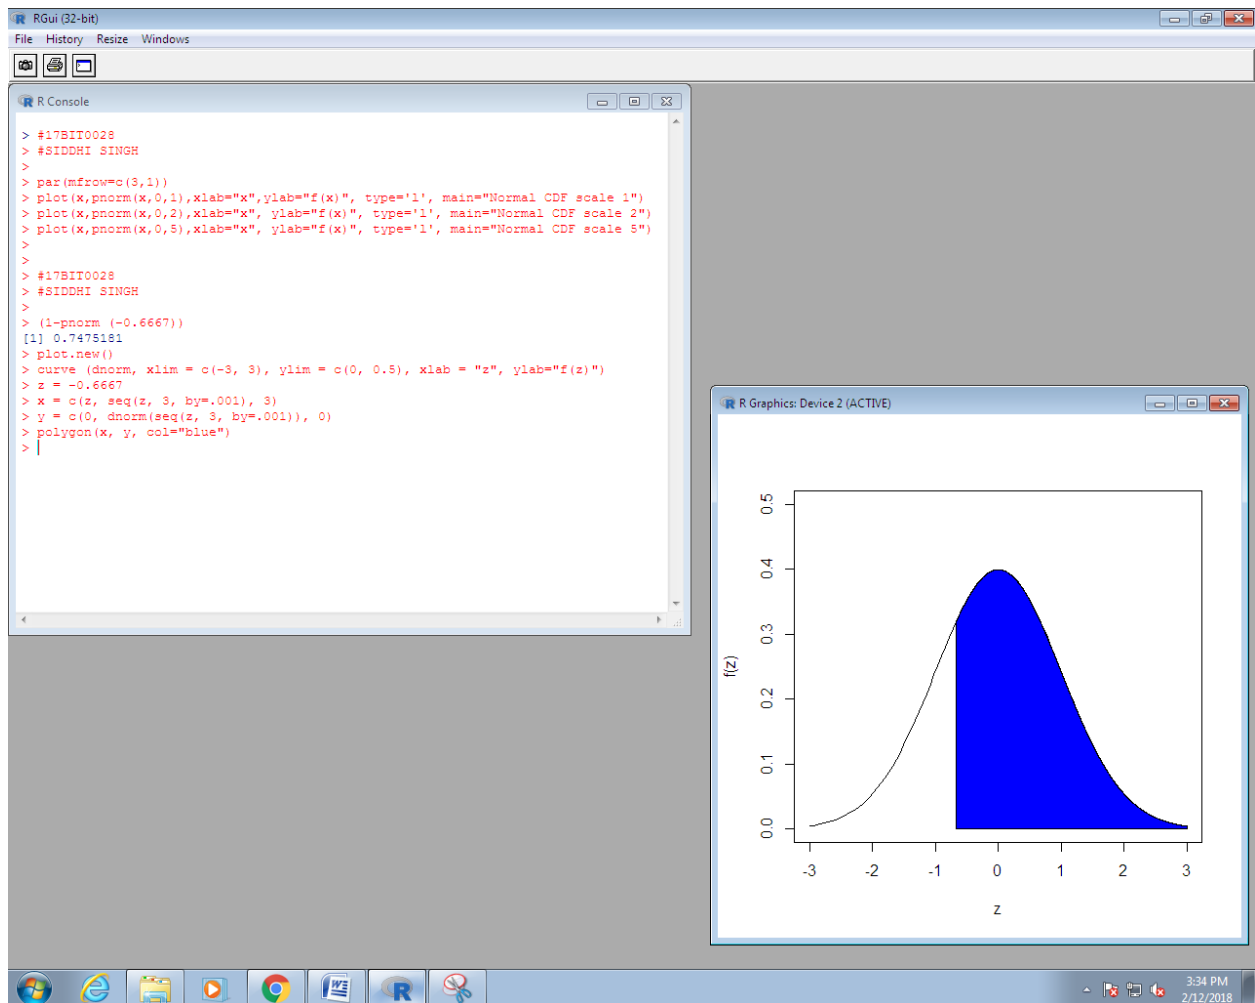

*(b) Normal distribution Cumulative Distribution Function with different scale parameters*

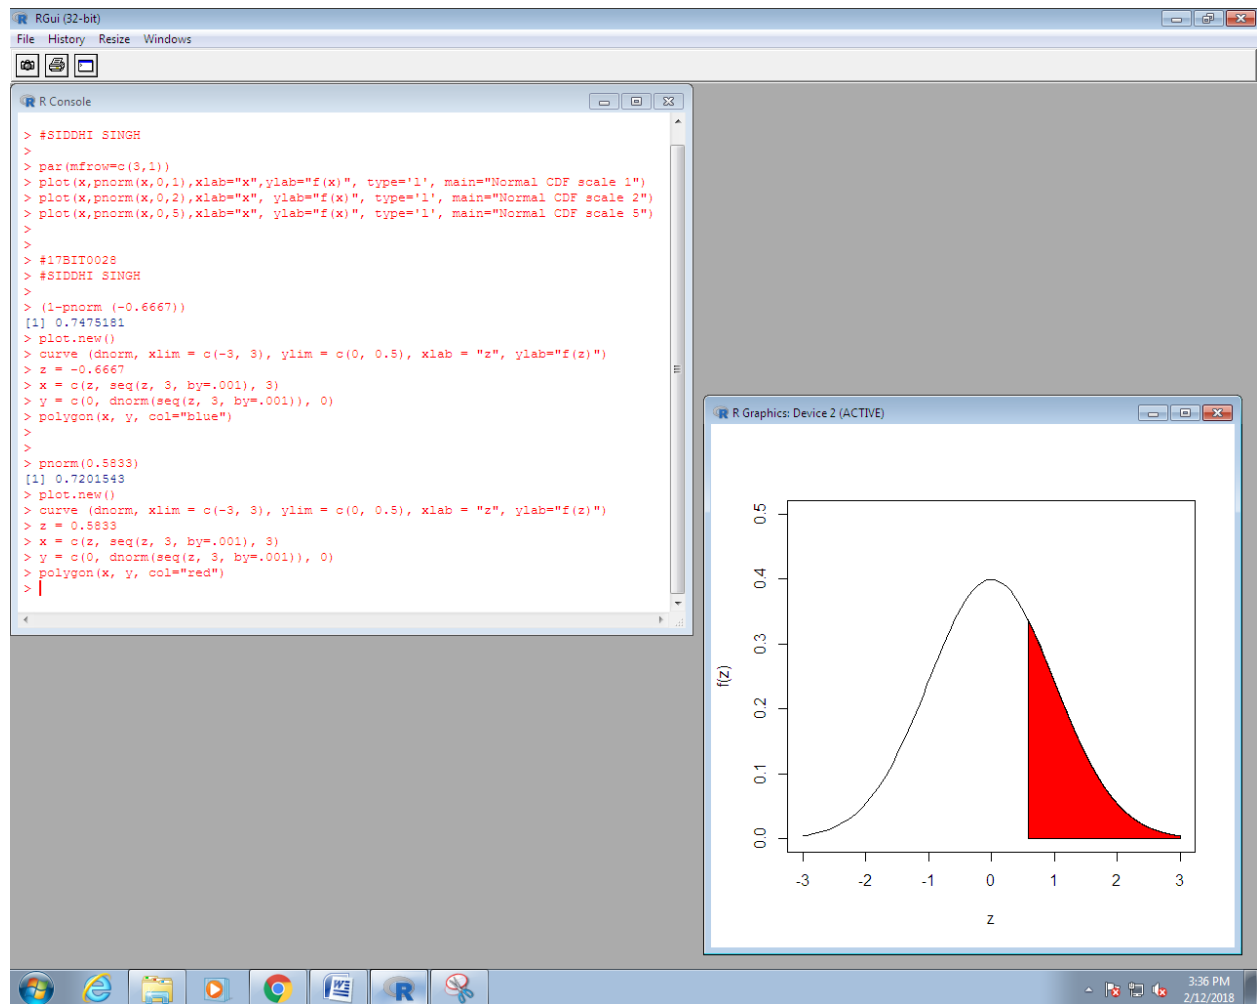

### CODE 9:

*Problem : In a photographic process the developing times of prints may be looked upon as a random variable having the normal distribution with a mean of 16.28 seconds and a standard deviation 0.12 second. Find the probability that it will take*

- (i) *Atleast 16.20 seconds to develop one of the prints;*
- (ii) *atmost 16.35 seconds to develop one of the prints*

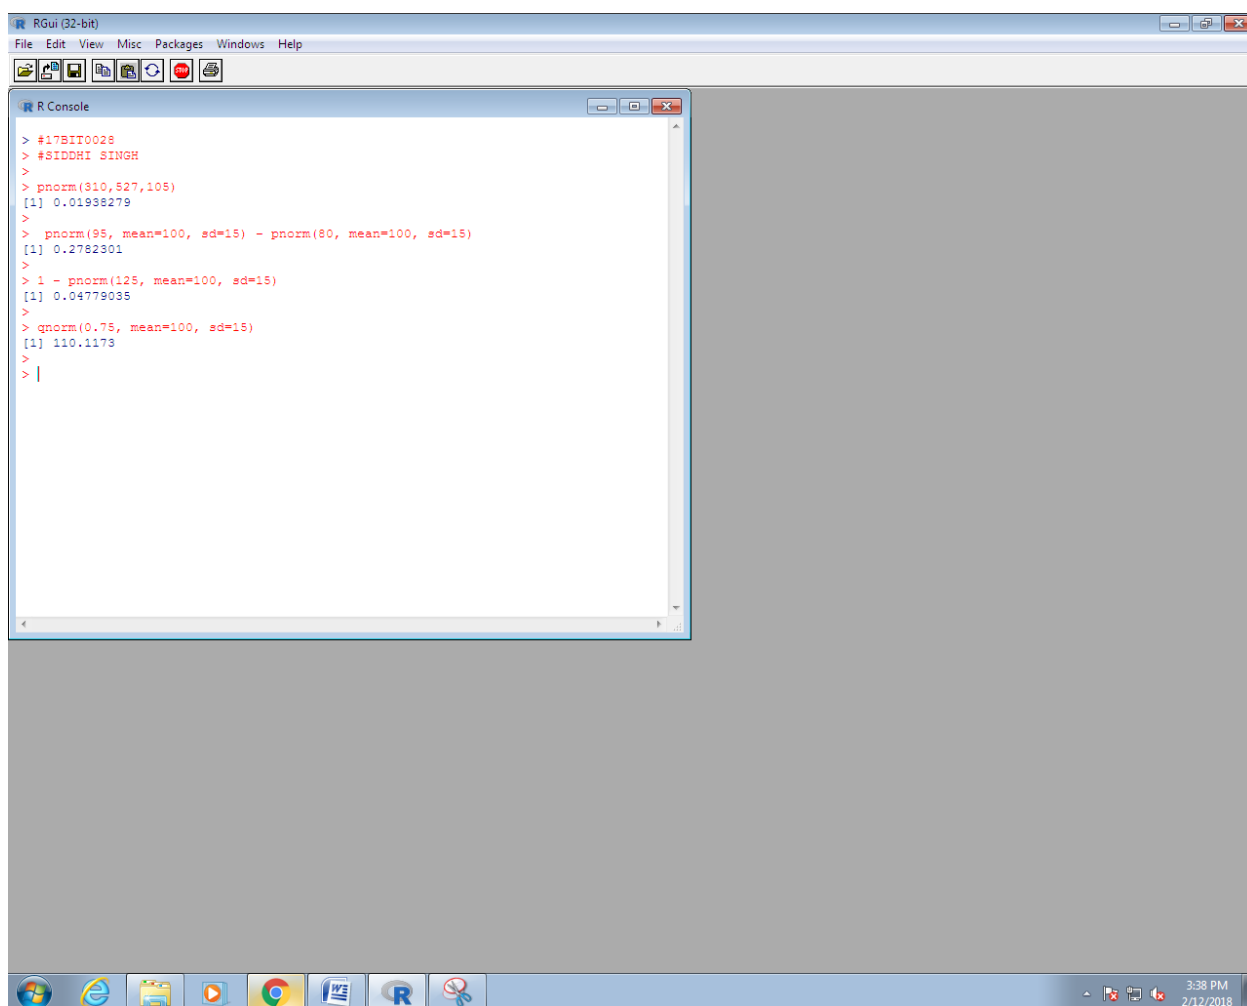

1. Suppose  $X$  is normal with mean 527 and standard deviation 105.  
Compute  $P(X \leq 310)$ .

2. If  $X \sim N(\mu = 100 \text{ pts.}, \sigma = 15 \text{ pts.})$

(i) Find  $P(80 \text{ pts.} < X < 95 \text{ pts.})$

(ii) Find  $P(X > 125 \text{ pts.})$ .

(iii) Find  $P_{75}$ , the 75<sup>th</sup> percentile of the above distribution. This is the same as the 0.75 quantile.

- `#17BIT0028`
- `#SIDDDHI SINGH`
- `pnorm(310, 527, 105)` returns `[1] 0.01938279`
- `pnorm(95, mean=100, sd=15) - pnorm(80, mean=100, sd=15)` returns `[1] 0.2782301`
- `1 - pnorm(125, mean=100, sd=15)` returns `[1] 0.04779035`
- `qnorm(0.75, mean=100, sd=15)` returns `[1] 110.1173`

The taskbar at the bottom shows the Windows Start button, several application icons (including Chrome and R), and the system clock indicating 3:38 PM on 2/12/2018.

3. The weekly wages of 1000 workmen are normally distributed around a mean of Rs. 70 with S.D of Rs 5. Estimate the number of workers whose weekly wages will be

- Between Rs 69 and Rs 72
- Less than Rs 69
- More than Rs 72

[illegible]

4. In a test on 2000 Electric bulbs ,it was found that the life of particular make, was normally distributed with an average life of 2040 hours and S.D of 60 hours. Estimate the number of bulbs likely to burn for

- (i) More than 2150 hours
- (ii) Less than 1950 hours
- (iii) More than 1920 hours but less than 2160 hours
- (iv) More than 2150 hours
